

Let experts build your flow cytometry panel

Save time building your panel with help from our team of scientists

What's better than one scientist? A whole team. With this free service, you'll receive specialized expert support when building or optimizing your multicolor panel. It includes a review by two scientists to help ensure you have minimal spillover, increased resolution, and go-to antibodies and reagents to help with success on your flow cytometer.

Benefits of our free panel design service include:

- Quick turnaround between first draft and final panel design
- Final panel design reviewed by two scientists
- Antibody and reagent recommendations

Tips and tricks:

- How to establish a panel
- Panel revision and troubleshooting
- Improving panel quality

Flow cytometry panel building resources

Find turnkey solutions using our comprehensive flow cytometry tools and resources

Whether you like to do things yourself or have expert support by your side, we have the tools and resources you need to help ensure success on your flow cytometer.

Self service

Flow cytometry antibody search tool

- Go to thermofisher.com/flowantibodies
- Target and fluorophore selection
- See published panels on thermofisher.com/omip

Panel builder online tool

- Go to thermofisher.com/panelbuilder or thermofisher.com/flowpanel
- Easy-to-use web tool that incorporates selected antibodies and fluorophores using your flow cytometer's configuration
- Video tutorials for conventional and spectral flow cytometry

Invitrogen™ SpectraViewer online tool

- Go to thermofisher.com/spectraviewer
- Interactive tool to select the optimal fluorescent dyes for your experiment
- Visualize your fluorophore spectra and easily compare them

Expert support

Flow cytometry panel design service

- Go to thermofisher.com/flowhelp
- Free expert support when building or optimizing your multicolor panel

Tech support

- Go to thermofisher.com/contactus
- Customer request form for help with panel building

Flow cytometry sales specialist

- For all support—from specific antibodies and reagents to building high-parameter flow panels
- Discuss your needs—our specialists will recommend the best solution at a great price
