

Discontinuation October 2018

Dear Customer,

Please be informed that the intended discontinuation of CaptureSelect C-tag Affinity Matrix product line is postponed to October 2018. These products will be replaced by CaptureSelect C-tagXL.

CaptureSelect C-tagXL Affinity Matrix is an improved version of the C-tag Affinity Matrix. The improved version is also suitable for cGMP production at large scale (packing sizes 250 - 5L). For this application a ligand leakage ELISA and a regulatory support file is available. The specificity and the binding/elution conditions have not changed. In addition, the C-tagXL Affinity Matrix is available in 1 and 5 ml pre-packed column format.
