# Watson Mercury Speciation System

The Thermo Scientific™ Watson MSS is a Continuous Emissions Monitoring System that offers high measurement sensitivity and robust operation in harsh environments. The system measures Total Mercury, HgT for compliance, as well as reports Mercury Speciation, Hg0 and Hg2+, for process control and optimization. By utilizing Cold Vapor Atomic Florescence (CVAF), there is no interference from other stack gases, as proven in by the large install base of over 600+ systems world-wide by Thermo Scientific. The Watson MSS provides power producers, waste incinerators, and cement manufacturers a complete integrated solution for meeting tightening regulations.
