TaqMan SARS-CoV-2 Mutation Panel

A customizable menu of verified real-time PCR assays to give you the results you need today, while preparing you for what's to come

Applied Biosystems™ TaqMan® SARS-CoV-2 Mutation Panel is designed to be used with the following instruments or kits:

- Applied Biosystems™ 7500 Real-Time PCR Instrument
- Applied Biosystems™ 7500 Fast Real-Time PCR Instrument
- Applied Biosystems™ 7500 Fast Dx Real-Time PCR Instrument
- Applied Biosystems™ QuantStudio™ 5 Real-Time PCR System (96-well, 0.1 mL or 0.2 mL; and 384-well)
- Applied Biosystems™ QuantStudio™ 7 Flex Real-Time PCR System (384-well block)
- Applied Biosystems™ MagMAX™ Viral/Pathogen II Nucleic Acid Isolation Kit
- Applied Biosystems™ MagMAX™ Viral/Pathogen Nucleic Acid Isolation Kit
- Thermo Scientific™ KingFisher™ Flex Magnetic Particle Processor

This document lists all instruments, consumables, and reagents recommended for instrument installation, training, and running an experiment to identify currently relevant SARS-CoV-2 mutations from RNA. Please review this list carefully to ensure all necessary materials are available before installation and training dates. Missing materials can delay your setup process. Intended uses of the products mentioned may vary. For specific intended use statements, please refer to the product label.

Note: To avoid contamination, it is highly recommended that you have separate sets of pipettes for samples and extraction, PCR reaction setup, and any post-PCR processing. Ideally these steps should all be performed in separate laboratory spaces as well. Always follow necessary precautions when handling patient samples. Testing with the TaqMan SARS-CoV-2 Mutation Panel should be done by qualified and trained clinical laboratory personnel specifically instructed in the techniques of real-time PCR and research use procedures.

Naming convention

Gene. Mutation. Reference codon. Mutant codon

Note: For multi-nucleotide deletions the reference codon and mutant codon are not part of the naming convention. Ex. S.delH69V70.

Example:

S.D215G.GAT.GGT

Assays associated with the publication, A method for variant agnostic detection of SARS-CoV-2, rapid monitoring of circulating variants, detection of mutations of biological significance, and early detection of emergent variants such as Omicron by E. Lai, D. Becker, et al. are highlighted below in gray. For more information visit thermofisher.com/mutationpanel

Premier assays—Premier assays are high-demand assays for popular variants. These assays come in one standard size of 1,250 reactions and have shorter timelines for delivery than the custom assays (next page).

A maintained real-time PCR instrument will be calibrated for all dyes that are used with the mutation panel assays. Ensure that the calibrations for Applied Biosystems™ FAM™, VIC™, and ROX™ dyes are current. If calibration is required, refer to the standard calibration process in your instrument user guide. We strongly recommend qualifying the 7500 Fast Dx Real-

Time PCR Instrument with a certified engineer from Thermo Fisher Scientific. 7500 Fast Dx instruments do not require requalification if qualified within the last 6 months. For a list of all real-time PCR instrument calibration and verification kits, go to thermofisher.com/real-time-calibration-kits.
