

Confidently return to in-person learning for students nationwide

From the start of the pandemic, school districts have been tasked with difficult decisions about how to provide a quality education to all students while keeping them safe. Schools have successfully implemented safety precautions for remote or hybrid instruction models, such as social distancing, hand washing, and daily health-check forms, but it is important to be aware of COVID-19 cases on campus that are not detected by temperatures or symptoms. As schools work to bring back in-person instruction, we can help with an on-campus testing program.

Thermo Fisher Scientific and Color Health are partnering to provide a simple, ready-to-use, cost-effective COVID-19 testing solution for school districts of any size across the United States. This program provides administrators, teachers, staff, students, and parents with a streamlined process from onboarding to results.

How the program works

- 1 **Onboarding and registration**—smooth registration for families, students, and teachers through our user-friendly interface

- 2 **Training access**—intuitive staff training, communications, and FAQs

- 3 **Ready-to-use materials and test kits**—shipped straight to schools complete with test kits, prepaid return shipping materials, and signage for on-site efforts

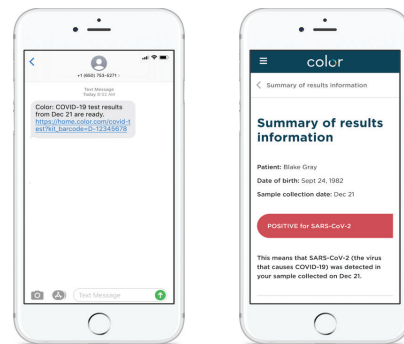

- 4 **Fast and easy sample collection**—simple method for collection of swabbed samples from students

- 5 **Pack and ship samples**—seamless prescheduled courier service to pick up collected samples in biohazard bags at a predetermined time

- 6 **Quick results**—digital access to results in approximately 24 hours for families, students, and teachers
