

Intuitive, customized data management

HyPerforma Single-Use Bioreactors and G3Lite and G3Pro Controllers

Consistent, accurate data management plays an important role for organizations in bioprocessing process development and scale-up. Dedicated data management platforms and automation solutions are a vital component of data governance, and we offer flexible software solutions hosted on the trusted Emerson™ DeltaV™ platform—to help manage your mammalian cell culture and microbial fermentation processes.

Our solution helps mitigate risks during all stages in biopharmaceutical scale-up and expansion. Efficient, process-specific measuring of critical parameters as well as the aggregation of this data enables you to get your final product to market quickly. This allows you to focus on your process optimization and scale-up, rather than worry about the tools that manage and automate process controls.

Note: This configuration is dependent on the application or number of systems.
