Application solutions – facial tissue

The Thermo Scientific™ APEX 100 Metal Detector is a reliable and affordable solution for detecting and removing foreign metal contaminants found in manufacturing within the food & beverage, pharmaceutical, and personal care industries.

In the case of a tissue manufacturer in China, the implementation of APEX metal detectors was necessary to ensure that any metal pieces originating from worn production machinery, human error, or inadvertently introduced through raw materials are effectively detected and removed from the manufacturing line. These metal detectors were strategically placed at the end of the production line, after the process of packaging into boxes.

By utilizing Thermo Scientific APEX metal detectors, the manufacturer was able to ensure the safety of their end customers and safeguard their brand reputation by eliminating the risk of metal contaminants in their products.
