

PGNAA Detection Limit Guidelines

1 H HYDROGEN	Ten Minute Threshold of Detectability:																		2 He HELUM		
<i>These are estimates of the threshold of detection. Actual limits may be somewhat different depending upon analyzer configuration and application.</i>										Excellent (<0.01%)	Very Good (0.01% to 0.1%)	Good (0.1% to 0.3%)	Moderate (0.3% to 1%)	Nominal (1% to 3%)	Minimal (3% to 10%)	None (>10%)	Unknown

The Thermo Scientific Elemental CrossBelt Analyzer (ECA) is used to control the sorting and blending of coals to maximize coal resources, reduce out-of-seam dilution and control preparation plant performance. The analyzer is designed for applications requiring process accuracy at a modest cost.

- Mounts around existing conveyor belt
- Provides minute-by-minute quality analysis of your critical process streams

The Thermo Scientific Coal Quality Manager (CQM) is the ultimate analyzer with the best accuracy available, which allows you to minimize variations in coal quality, ensure contract compliance, and improve your efficiency. It is the product of choice for coal producers and utilities where real-time knowledge of coal quality is critical, including load-outs, auger samplers and power plant bunker feed systems.

- Most accurate online analyzer in the industry
- Ideal in loadouts, prep plant control and bunker feed applications

The Thermo Scientific CB Omni and Thermo Scientific CB Omni Flex online elemental analyzers provide a reliable and accurate means of achieving consistent stockpile and raw mix chemistry to improve kiln efficiency and minimize production costs. This unique system provides minute-by-minute composition analysis of the raw materials used in the cement manufacturing process.

- Ease of installation
- Detector flexibility
- Flexibility in source of neutrons
- Proven solutions and support
- Legacy upgrades
