**ß-HYDROXYBUTYRATE**

**INTENDED USE**
Reagent for photometric determination of ß-Hydroxybutyrate in homogenous liquid samples using automated Thermo Scientific Arena or Gallery analyzer.

**METHOD**
Enzymatic test with D-3-Hydroxybutyric-Dehydrogenase (HBDH) and Nitrotetrazolium Blue (NTB).

**PRINCIPLE OF THE PROCEDURE**
ß-Hydroxybutyrate + NAD' ---HBDH---> Acetoacetate + NADH + H’
NADH + NTB (oxidized) ---Diaphorase---> NAD’ + NTB (reduced)

**REAGENT INFORMATION**
Reagent 1 (R1) 3 x 16 ml
Reagent 2 (R2) 3 x 4.5 ml

**Note:** Labels of reagents vials have two barcodes.
For Arena analyzers, turn the short barcode on the left side to the barcode reader.
For Gallery analyzers, turn the long barcode on the right side to the reading position of the reagent rack.

**Concentrations**

<table>

<td>NAD</td>
<td>≥ 4.3 mmol/l</td>
</tr>
<tr>
<td></td>
<td>NTB</td>
<td>≥ 0.34 mmol/l</td>
</tr>
</tbody>
</table>

**Precautions**
See the separate Safety Data Sheet for hazardous components.
The reagent R1 contains sodium azide (< 0.1 %) and the reagent R2 contains ProClin 300 as preservative. Do not swallow. Avoid contact with skin and mucous membranes. Take the necessary precautions for the use of laboratory reagents.

**Preparation**
The reagents R1 and R2 are ready-to-use.
**Note:** Check that there are no bubbles on the surface of the reagent when you insert vials in the analyzer.

**Warning:** After long storage in a refrigerator, it is possible that a slightly coloured violet precipitate appears. This does not influence the result, but the precipitate should be resolved through gentle swirling of the bottle.

**Storage and Stability**
Reagents in unopened vials are stable at 2...8 °C until the expiry date printed on the label. Do not freeze the reagents.
Refer to the Application Notes of your analyzer for the on board stability of reagents.

**SAMPLES**

**Sample Type**
Food and other sample material.

**Sample concentration and Arena/Gallery application**
All method related details are in the separate application note.

Arena and Gallery applications have a primary dilution of 1+0, this means that the automated dilution is not in use.

**Sample preparation**
If the sample has substances interfering the measurement, please handle it according to the following suitable preparation procedure:

- Use clear, colorless and practically neutral liquid samples directly.
- Filter or centrifuge turbid solutions.
- Degas samples containing carbon dioxide.
- Crush or homogenize solid or semi-solid samples.
- Weigh sufficient quantity of sample in a volumetric flask (take care of the measuring range), extract with water and filtrate, centrifuge or use Carrez clarification if necessary.
- Weigh sufficient quantity of fat containing samples into a volumetric flask (take care of the measuring range), extract with hot water. Cool to allow the fat to separate, make up the mark, place the volumetric flask in an ice bath for 15 min. and filter. Alternatively use Carrez clarification after extraction.
- Adjust acid samples to pH 8 by adding sodium or potassium hydroxide solution and incubate for approx. 15 min.
- Treat strongly colored samples with polyvinylpyrrolidone (PVPP e.g. 1 g/100 ml Sample).

**Carrez clarification:**
Weigh sufficient quantity of the sample into a 100 ml volumetric flask which contains approx. 60 ml dist. water. Subsequently carefully add 5 ml Carrez-I solution (potassium ferrocyanide, 85 mmol = 3.60 g K4[Fe(CN)6] × 3 H2O/100 ml), 5 ml Carrez-II solution (zinc sulphate, 250 mmol = 7.20 g ZnSO4 × 7 H2O/100 ml) and 10 ml 0.1 M NaOH. Mix after each addition. Fill the volumetric flask with water to the mark, mix and filter.

**TEST PROCEDURE**
See a separate application for the Arena or Gallery analyzer.

**Materials required but not provided**
Distilled water (aseptic and free of heavy metals) and general laboratory equipment.

ß-Hydroxybutyrate Std Cat no. 984392 (one level, water based) is not included in the kit.

**Calibration**
Water based ß-Hydroxybutyrate Std can be used or other. Ordering code for ß-Hydroxybutyrate Std is 984392 (3x3 ml). The standard is ready-to-use.

**Quality Control**
Use quality control samples at least once a day and after each calibration and every time a new bottle of reagent is used. It is recommended to use two level of controls. The control intervals and limits must be adapted to the individual laboratory requirements. The results of the quality control sample(s) should fall within the limits preset by the laboratory.

Available controls:
ß-Hydroxybutyrate Std can be used. If ß-Hydroxybutyrate Std is used also for calibration, an additional internal control is recommended to be used.

**CALCULATION OF RESULTS**
The results are calculated automatically by the analyzer using a calibration curve.

Conversion factors:

- mg/l x 0.009606 = mmol/l
- mmol/l x 104.10 = mg/l

**Calibration Curve (example)**
### Limitations of the Procedure

**Interference**

The determination is specific for ß-Hydroxybutyrate. L-Hydroxybutyric acid is not measured.

**Measuring Range**

The test has been developed to determine ß-Hydroxybutyrate concentrations within a measuring range from 10 to 350 mg/l.

### Performance Characteristics

The results obtained in individual laboratories may differ from the performance data given.

#### Determination limit (Test limit low)

The determination limit is the lowest concentration that can be measured quantitatively. The determination limit for this method is 10 mg/l.

#### Precision

**Arena analyzer**

<table>
<thead>
<tr>
<th></th>
<th>Mean 52 mg/l</th>

</tbody>
</table>

A precision study was performed using Gallery for 5 days, with the number of measurements being \( n = 50 \).

### Waste Management

Please refer to local legal requirements. Empty the cuvette waste bin daily immediately after the analysis.

### Other Remarks

All results must be verified by laboratory quality control samples.

Manufacturer does not warrant that the product is error-free or will accomplish any particular result. In no event shall the manufacturer be liable for special, incidental, indirect, punitive or consequential damages (including, but not limited to, loss of profits, loss of goodwill, loss of data or loss of use damages) arising out of the use or disposition of the products.
