Aligning the Micro-Adjustable Impact Bead

Remove the cap from the spray chamber by removing the four (4) black knurled screws and the gas hose to the nebulizer.

Note: Do not lose the o-ring and seal from inside of the cap. Make sure it is back in place when you re-install the cap on the spray chamber.

Loosen the Allen clamping screw until the impact bead can move.
Turn the cap over and push and rotate the impact bead so that it is centered on the nebulizer and touching the nebulizer. Hold it in place with your finger.

While holding the impact bead in place rotate the knurled knob until the end of the impact bead is flush with the front of the clamp. Tighten the Allen clamping screw until the impact bead stem is held firmly. The impact bead should now be correctly installed and aligned.

Re-install the cap onto the spray chamber and re-connect the gas line and the capillary to the nebulizer.
