

# Routine Multi-Pesticide Residue Analysis by Orbitrap MS Technology

Osama Abu-Nimreh  
CMD Sales Support Specialist  
MECEC , Dubai

# Challenges of Pesticide-Residues Analysis

- Sample variability (matrix)
- Different compound characteristics
- Large number of samples
- Hundreds of analytes monitored
- Low levels controlled
  - Baby food  
(MRL for all pesticides = 0.01 mg/kg)
- Fast response required

# Former Pesticide Multi-Residue Method Setup

## ■ Extraction

Acetonitrile, Ethyl acetate, Methanol...

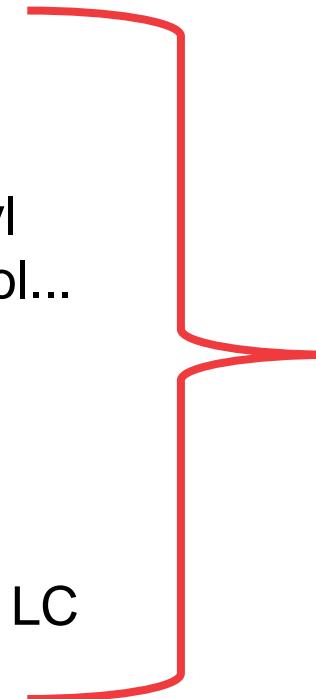

## ■ Clean-up

GPC, SPE, LLE, LC

## ■ Determination

GC, LC, GC-MS, LC-MS, GC-MS/MS, LC-MS/MS...

Mostly replaced by **QuEChERS** today

Thermo Scientific™ QuEChERS™  
method

# Simplified Extraction Procedure Applied

**10 g of sample is weighed into Quechers extraction tube**

**+ 20 mL of water**

**+ 10 mL of ACN**

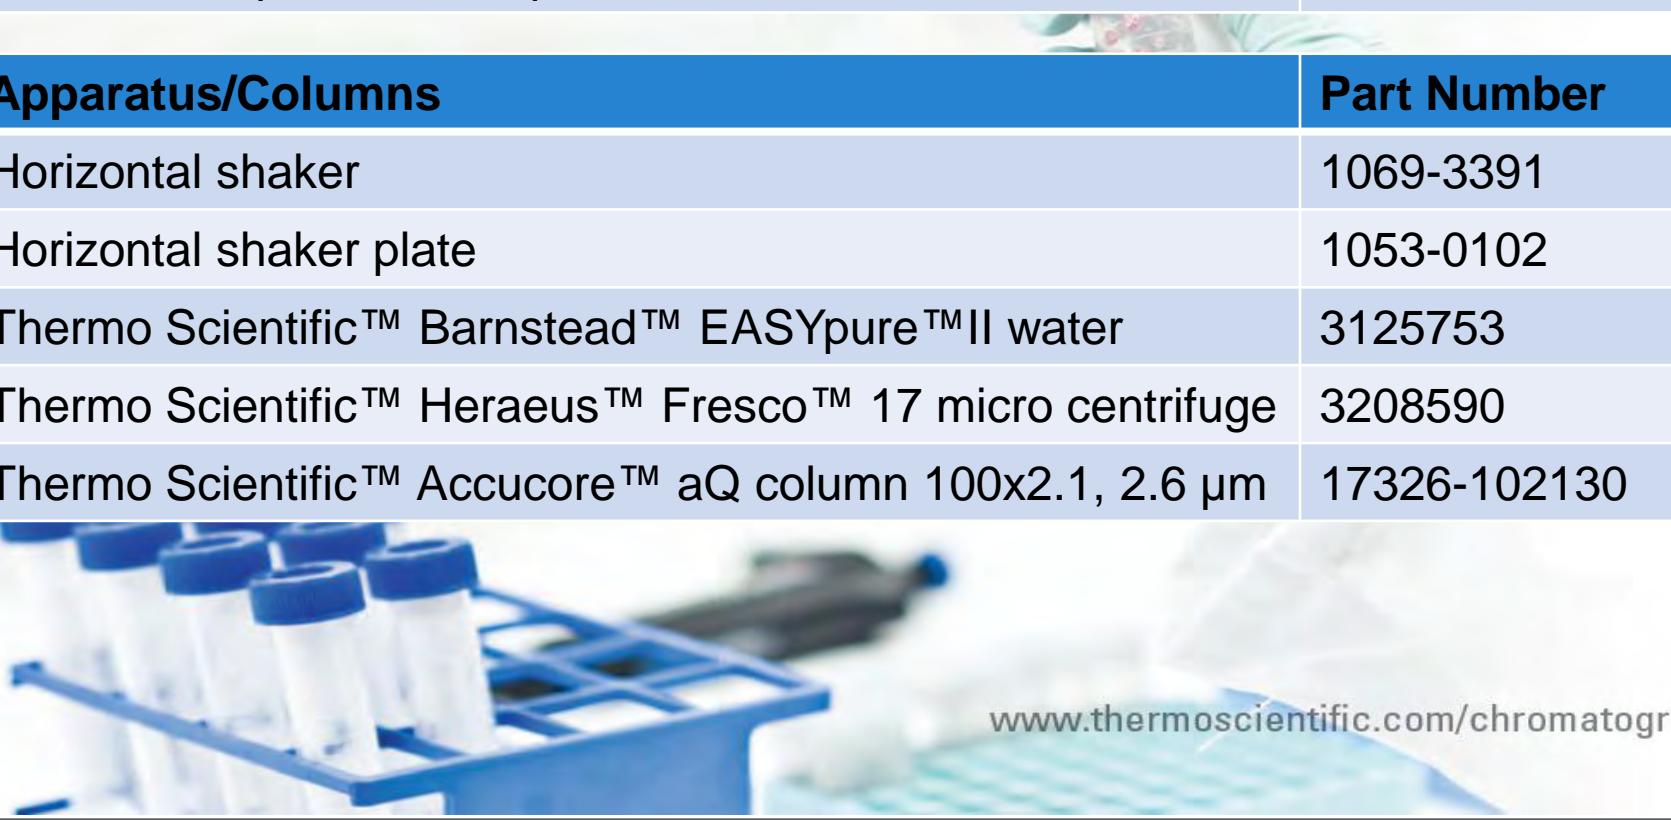

**shaking 10 min**

**Centrifugation 5 min @ 5000 rpm**

**Injection to LC-HRAM**

# Consumables Used

| Consumables/Chemicals                                   | Part Number  |
|---|--------------|
| Acetonitrile  | A/0638/17    |
| QuEChERS extraction tube, 50 mL, 250 pack               | 60105-216    |
| QuEChERS pouches, 50 pack                               | 60105-344    |
| Apparatus/Columns                                       | Part Number  |
| Horizontal shaker                                       | 1069-3391    |
| Horizontal shaker plate                                 | 1053-0102    |
| Thermo Scientific™ Barnstead™ EASYpure™ II water        | 3125753      |
| Thermo Scientific™ Heraeus™ Fresco™ 17 micro centrifuge | 3208590      |
| Thermo Scientific™ Accucore™ aQ column 100x2.1, 2.6 µm  | 17326-102130 |

A blurred background image showing laboratory glassware, including several test tubes with blue caps in a blue tray, and a small black device, possibly a pipette or a small centrifuge, on a light-colored surface.

# Improving QuEChERS Extraction Tips & Tricks:

- **Dry food (cereals/dried food, < 25 % water content):**
  - Addition of water to enable adequate partitioning and reducing interaction of pesticides with matrix
- **Food containing fat/wax (avocado/oil):**
  - After extraction step add a freezing out step and transfer supernatant to clean-up tube
  - More clean-up might be needed of raw extract (PSA+C18)
- **Food containing complex matrix (tea/spices)**
  - Additional clean-up with GCB might be necessary (potential loss of planar structure pesticides like thiabendazole)
- **Acidic food (citrus):**
  - Adjust pH (5-5.5) to increase recovery (e.g. citrate buffering salts in QuEChERS extraction tube) and reduce coextraction of matrix interferences (Note: acid labile compounds require higher pH 8)

# Improving QuEChERS Clean-up Tips & Tricks:

- **QuEChERS clean-up tube additives:**

## Product Selection

| Matrix Type             | Examples                    | Sorbent Requirements             |
|-------------------------|-----------------------------|----------------------------------|
| General Matrices        | Apples<br>Cucumber<br>Melon | Magnesium Sulfate, PSA           |
| Fatty Matrices          | Milk<br>Cereals<br>Fish     | Magnesium Sulfate, PSA, C18      |
| Pigmented Matrices      | Lettuce<br>Carrot<br>Wine   | Magnesium Sulfate, PSA, C18, GCB |
| High Pigmented Matrices | Spinach<br>Red Peppers      | Magnesium Sulfate, PSA, C18, GCB |

# Pesticide Analysis by HRMS

**Start-to-finish**  
workflows for pesticide analysis

**Thermo**  
SCIENTIFIC

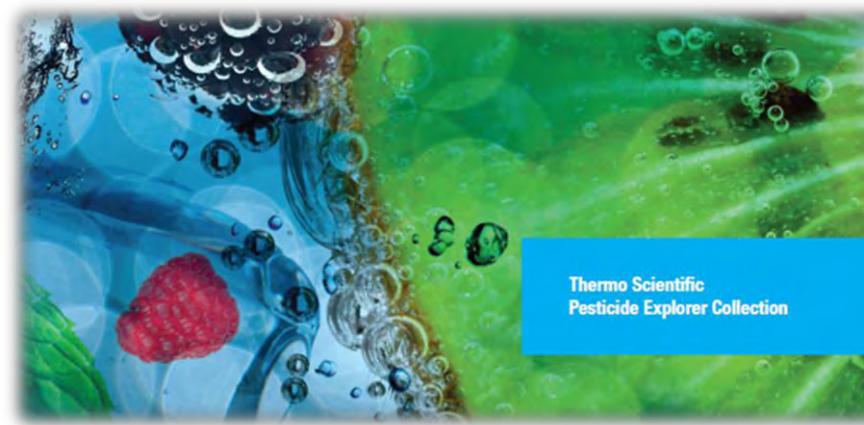

*Configuration and complete start-up kit provides everything needed to perform robust, high resolution routine workflows for rapid screening and quantitation of pesticides, from the QuEChERS sample extraction kit to proven multi-class pesticide residue analysis methods.*

Thermo Scientific™ Q Exactive™ Focus MS

## Quantitation Package

- Thermo Scientific™ TraceFinder™ 4.1 software
- EFS HRAM MS/MS Spectral Library 2.0
- USB (Methods and User guide)

Thermo Scientific  
Pesticide Explorer Collection

- Pesticide Explorer Collection comes with the software installation instructions as you open the box. It is an easy to follow guide that walks you through the process from installation to activation of the software.
- Pesticide Explorer Collection also comes with an usb drive which includes a Method Installation guide as well as methods and libraries. This document outlines the necessary steps that will be needed to install the Pesticide methods and it's library within TraceFinder software as well as using TraceFinder software.

# Q Exactive™ Focus - What is New?

# 3 ways of Quantitation/Screening for Routine Work

## Full MS or targeted SIM/ddMS2

- Post-acquisition - extracted ion chromatograms of parent ions of interest
- Relies on high resolution for selectivity
- Useful for less complex background
- No method development/preparation needed

### Experiments

#### General

- Full MS
- SIM
- PRM
- Full MS - AIF
- Full MS - vDIA

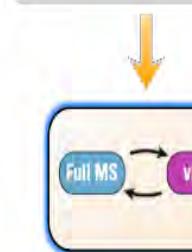

## Full MS/ All Ion Fragmentation – vDIA\*

- Post-acquisition - extracted ion chromatograms of parent ions of interest
- Scheduled target (inclusion) list (Rt,  $m/z$ )
- Minimum method development (e.g., predefine parent ions, tr)
- Also for screening purposes

### Experiments

#### General

- Full MS
- SIM
- PRM
- Full MS - AIF
- Full MS - vDIA

## PRM (Parallel Reaction Monitoring)

- Post-acquisition – extracted ion chromatograms of parent  $\rightarrow$  fragment transitions acquired
- Scheduled target list (Rt,  $m/z$ , collision energy)
- Most sensitive and selective even in highly complex matrices

### Experiments

#### General

- Full MS
- SIM
- PRM
- Full MS - AIF
- Full MS - vDIA

Constant peak area

No peak in tea at 10 ppb

Peak neither in honey nor in tea at 10 ppb

Not found at all

Bad peak shape

No peak in honey at 10 ppb

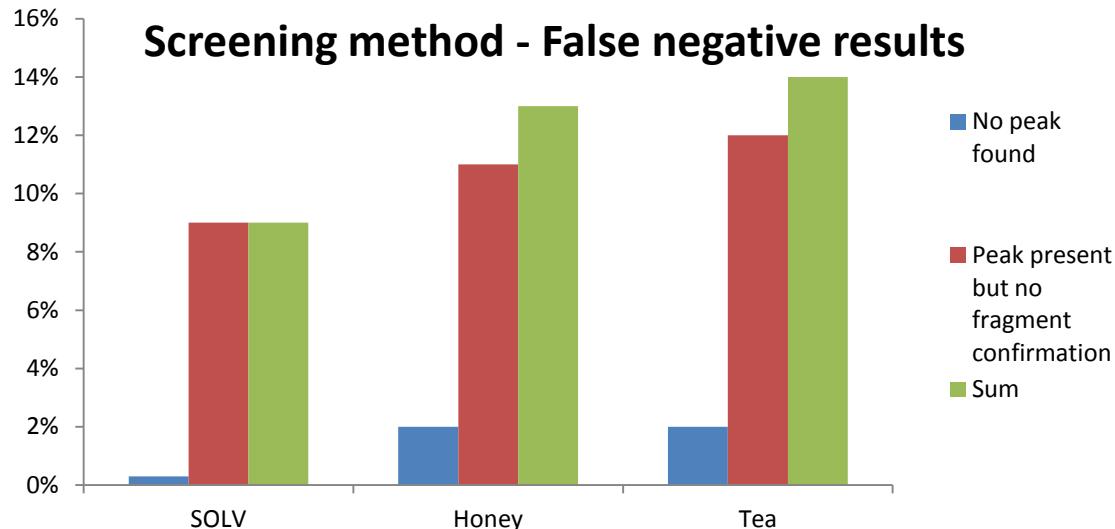

Compound H or T Missing fragment ion confirmation in one of the matrices at 10 ppb

# Validation Parameters

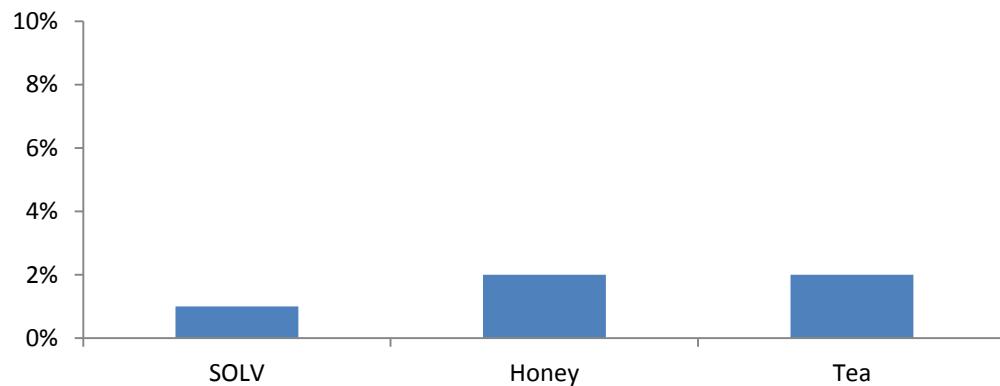

- Selectivity criteria: RT, min. detection of 1 HRAM quan and 1 HRAM qual ion with 5 ppm mass accuracy, ion ratio
- False negative and positive evaluation
- Recovery & repeatability at two concentration levels: 10 & 100 µg/kg
- Injection precision – 10 repeated injections of standard 100 µg/kg
- Screening detection limit (SDL), LOD/LOQ definition
- Linearity: 5 levels matrix matched calibration, duplicate measurement

# Screening Method Efficiency – % of 330 Target Pesticides

**Peak confirmation criteria:**  
 $t_R$ , HRAM with 5 ppm accuracy and fragment ion presence

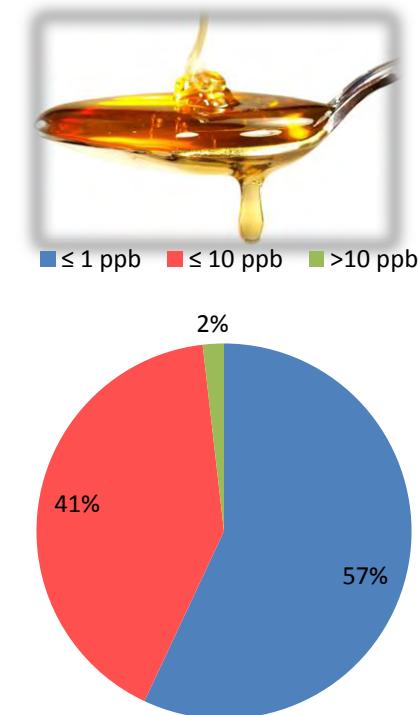

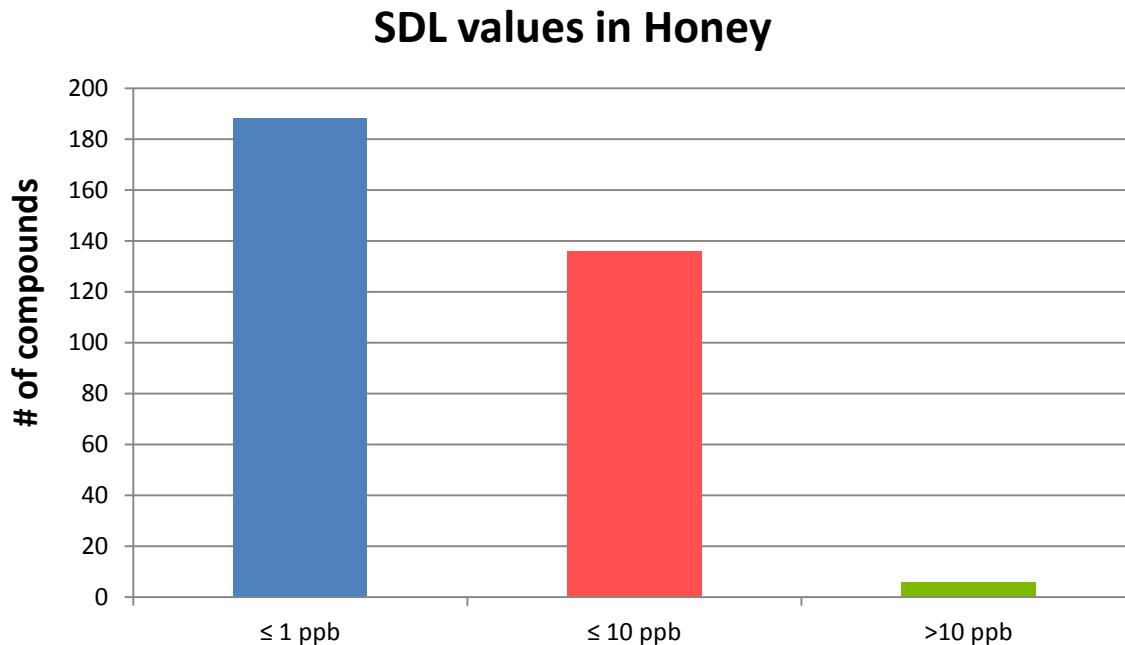

### Screening method - False positive results

**DG SANCO defines:**  
False negative < 5 %  
No criteria for false positives

# Results vDIA – Sensitivity Overview Honey

- Screening Detection Limits (SDL) in honey matrix

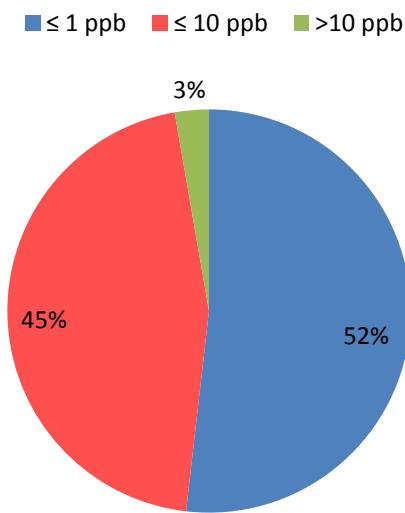

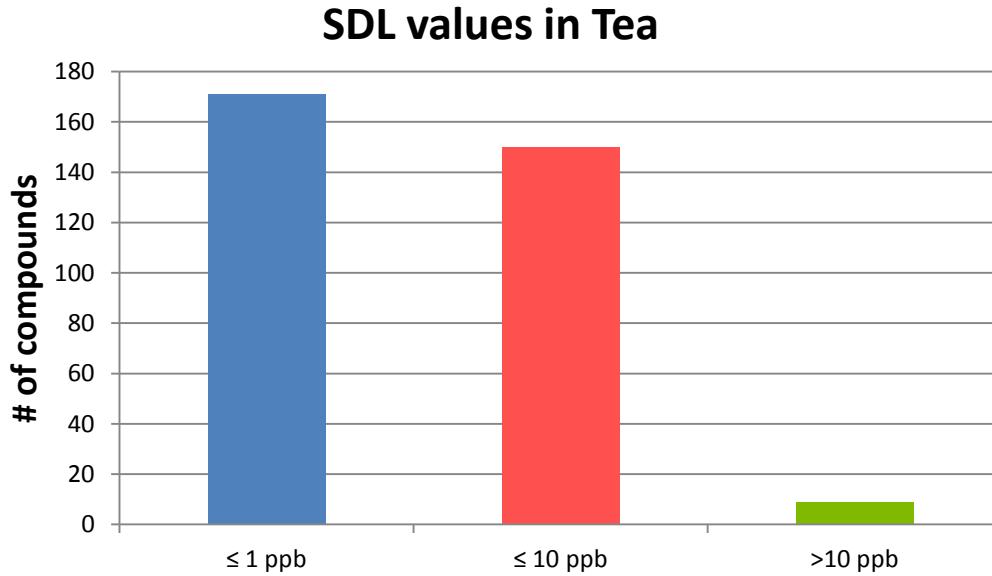

**SUM = 330 compounds; 324 compounds SDL ≤ 10 µg/kg**

SDL determination according to SANCO12571/2013

# Results vDIA – Sensitivity Overview Tea

- Screening Detection Limits – Tea matrix

**SUM = 330 compounds; 321 compounds  $SDL \leq 10 \mu\text{g/kg}$**

SDL determination according to SANCO12571/2013

# Missing Compounds at 10 ppb

SDL and MRL values for compounds not seen at 10 ppb

# vDIA - Repeatability – For 12 Representatives

# Azoxystrobin in Solvent and Tea at 10 ppb [ $\mu$ g/kg]

# Calibration Curves in Honey Matrix

# Summary

- Complete workflow solution for multi-pesticide analysis has been evaluated
- Performance parameters of a complete routine method were tested and demonstrated that the vast majority of routinely measured LC amenable compounds can be analysed with high degree of confidence
- <10ppb (ug/kg) screening detection limit was achieved for >95 % of targeted compounds in all matrices (tea and honey)
- Excellent values under repeatability conditions
- TraceFinder software package allows streamlined method optimization, data acquisition and fast processing and reporting
