ThermoFisher SCIENTIFIC

Pharmaceutical Intermediate Impurity Profiling

Pharma Tours | 2016

Overview

- **Demonstrate new features and capabilities that enable confident identification and quantification of unknown impurities**

Overview

- **Present new GC-MS technology**
- **Demonstrate new features and capabilities that enable confident identification and quantification of unknown impurities**

Overview

- **Present new GC-MS technology**
- **Demonstrate new features and capabilities that enable confident identification and quantification of unknown impurities**
- **Demonstrate pharmaceutical intermediate impurity analysis with real-world samples analyzed in partnership with AstraZeneca**

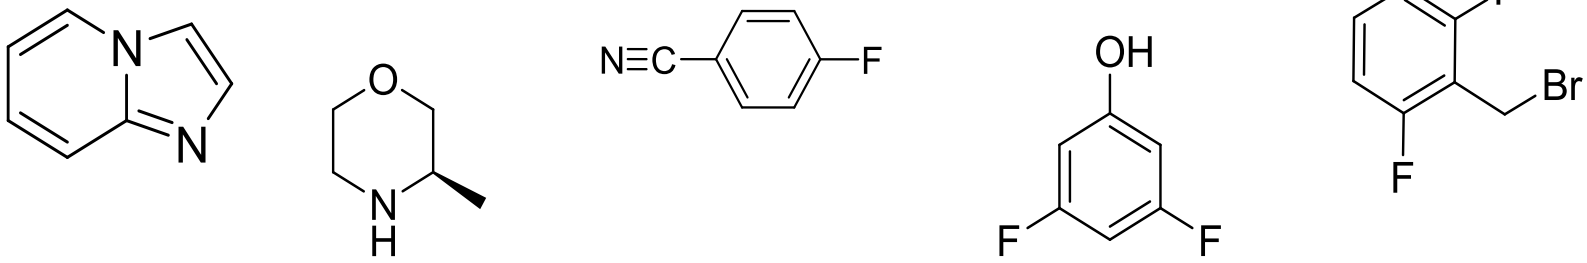
AstraZeneca study objectives

"High mass accuracy is an advantage when it come to looking at identifying compounds. This increases the confidence in structural characterisation."

- Aim: Analyze low molecular weight compounds, typical of starting materials
  - Analyze at relevant concentrations (1% to 0.0001% (v/v) for liquid samples)
  - Unambiguously confirm structure of intermediate and impurities through accurate mass measurement and sub-structural analysis.
  - Asses performance across concentration ranges.

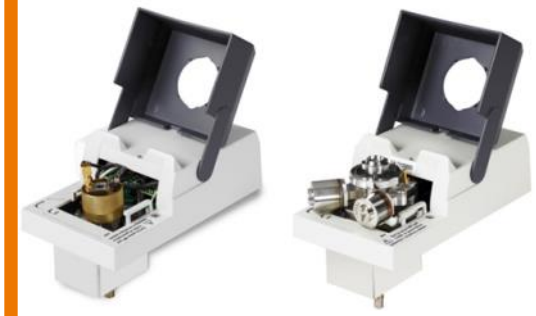


Introducing Thermo Scientific™ Q Exactive™ GC

Quadrupole-Orbitrap GC-MS/MS system

ThermoFisher SCIENTIFIC

Integration of 3 highly successful technologies



Thermo Scientific™ TRACE™ 1310 GC

rapid heat cycling

unique modular injector and detector design

ThermoFisher SCIENTIFIC

Integration of 3 highly successful technologies

Thermo Scientific™ ExtractaBrite™ ion source technology

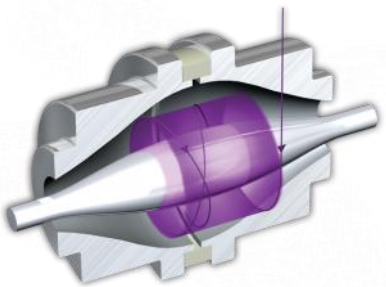
Routine grade robustness

Removable without breaking vacuum

Patented RF lens protects ion guide and quads

ThermoFisher SCIENTIFIC

Integration of 3 highly successful technologies

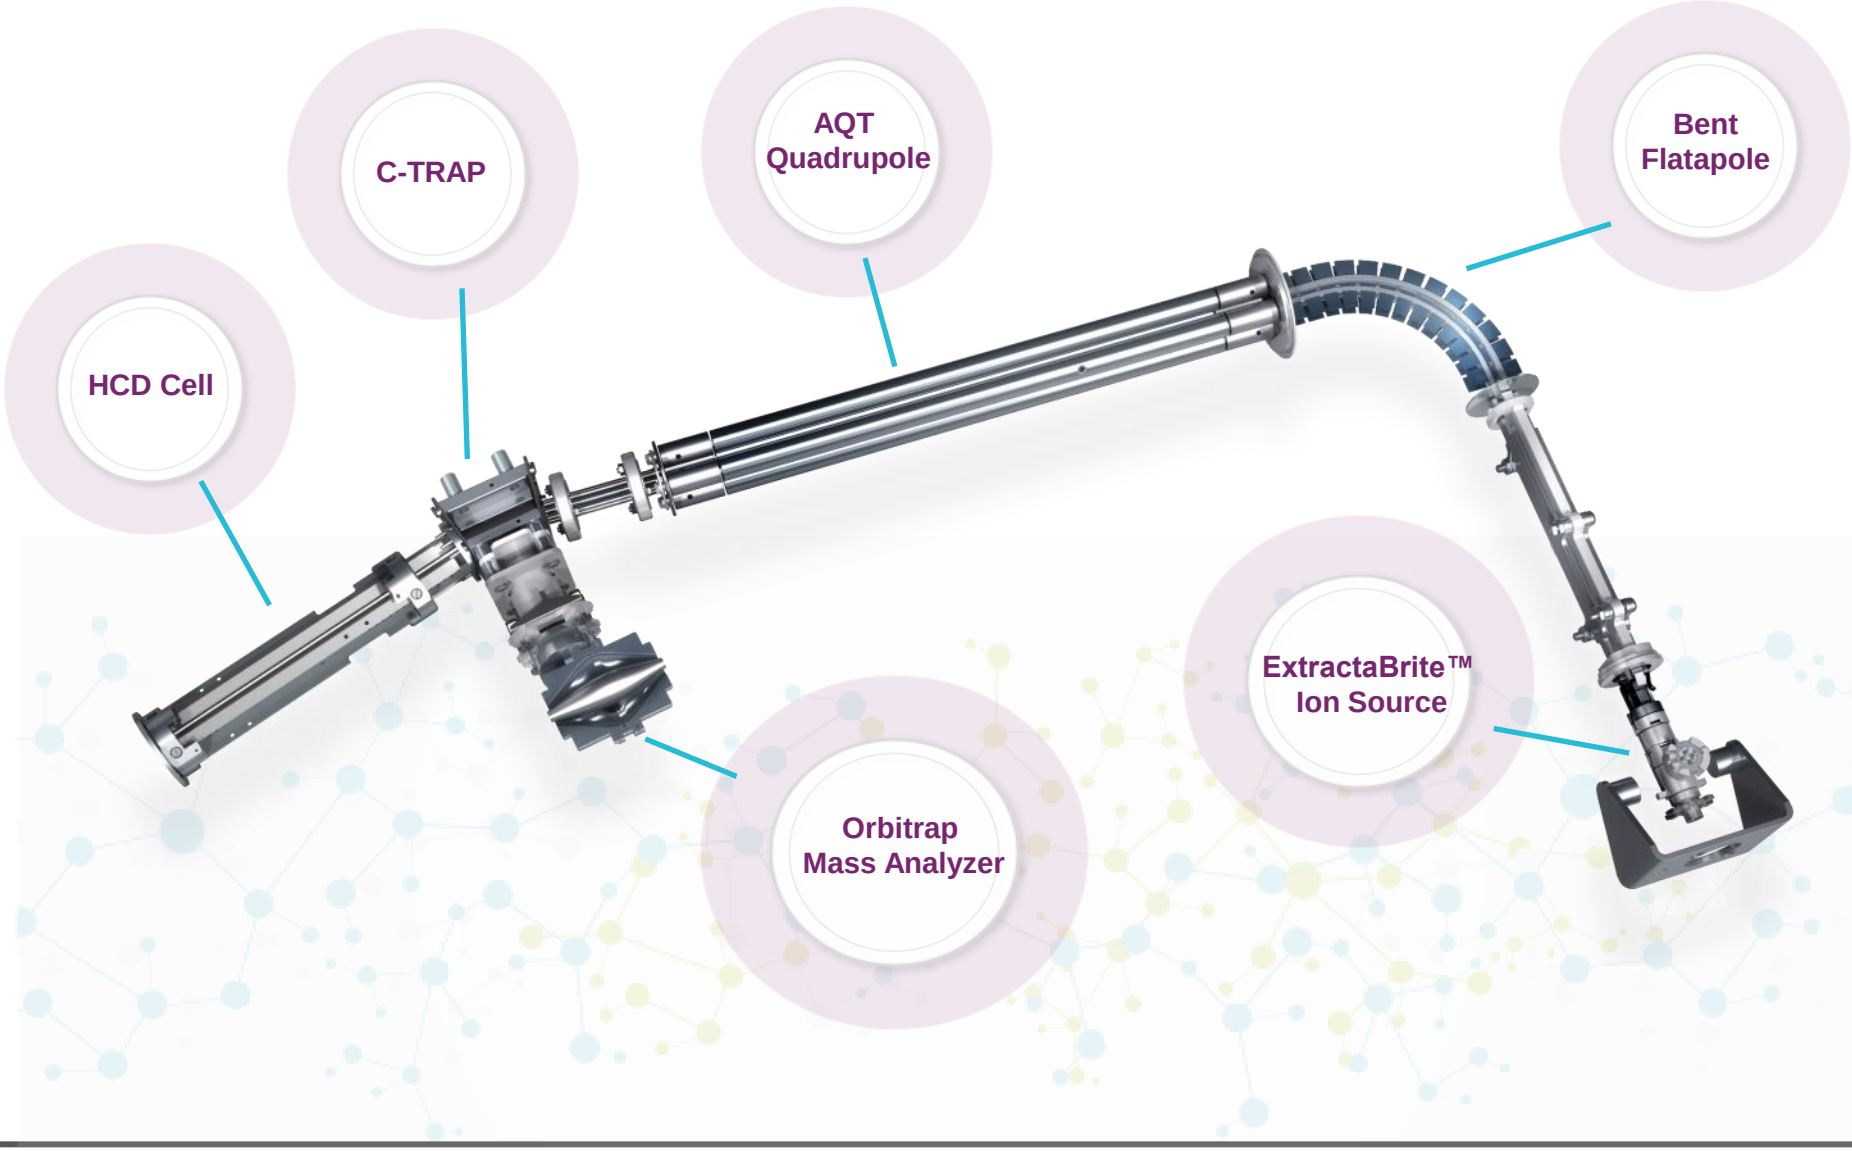


Thermo Scientific™ Orbitrap™ mass analyzer technology

Incredible HR/AM performance

Proven Thermo Scientific™ Q Exactive™ platform

Bringing GC and Orbitrap Technology Together



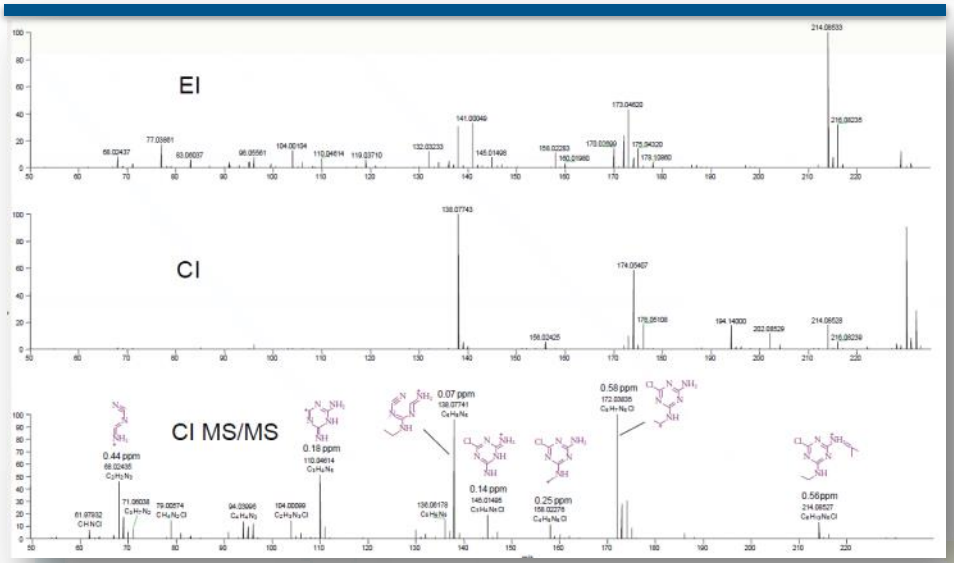
ThermoFisher SCIENTIFIC

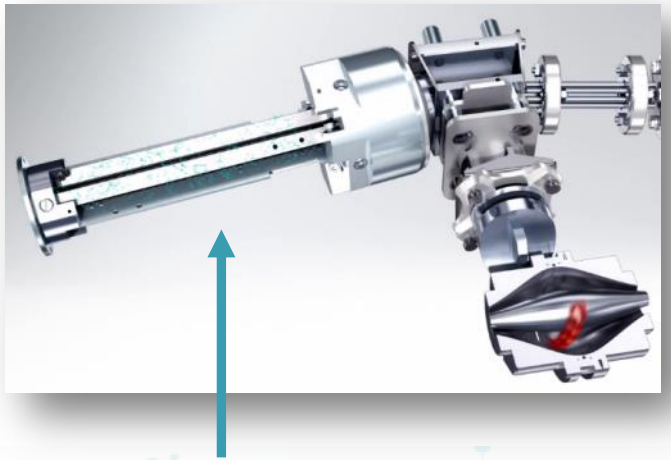
Chemical ionization for molecular ion

Remove entire ion source or change to CI source in under 2 minutes without venting…

Q Exactive GC: Compound Discovery and Identification

MS/MS for structural information





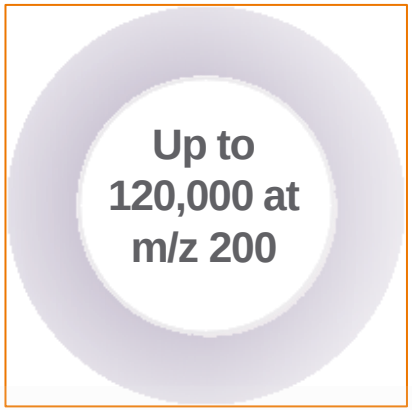
Fragmentation in HCD Cell

- Thermo Scientific™ Mass Frontier™ software can be used for sub-structural interpretation
- Sub ppm accurate mass allows for higher confidence in fragment IDs

Breakthrough in GC-MS capability

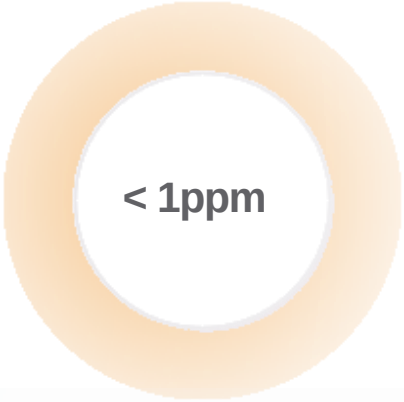
The Power of Q Exactive GC

Resolution



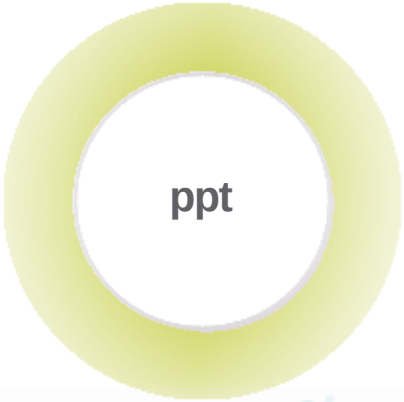
- Highest available
- Maximum selectivity
- Fast enough for GC!

Mass Accuracy



- Every scan
- All concentrations
- In complex matrix
- Across the mass range from 30 – 3000 m/z
- Everyday!

Sensitivity

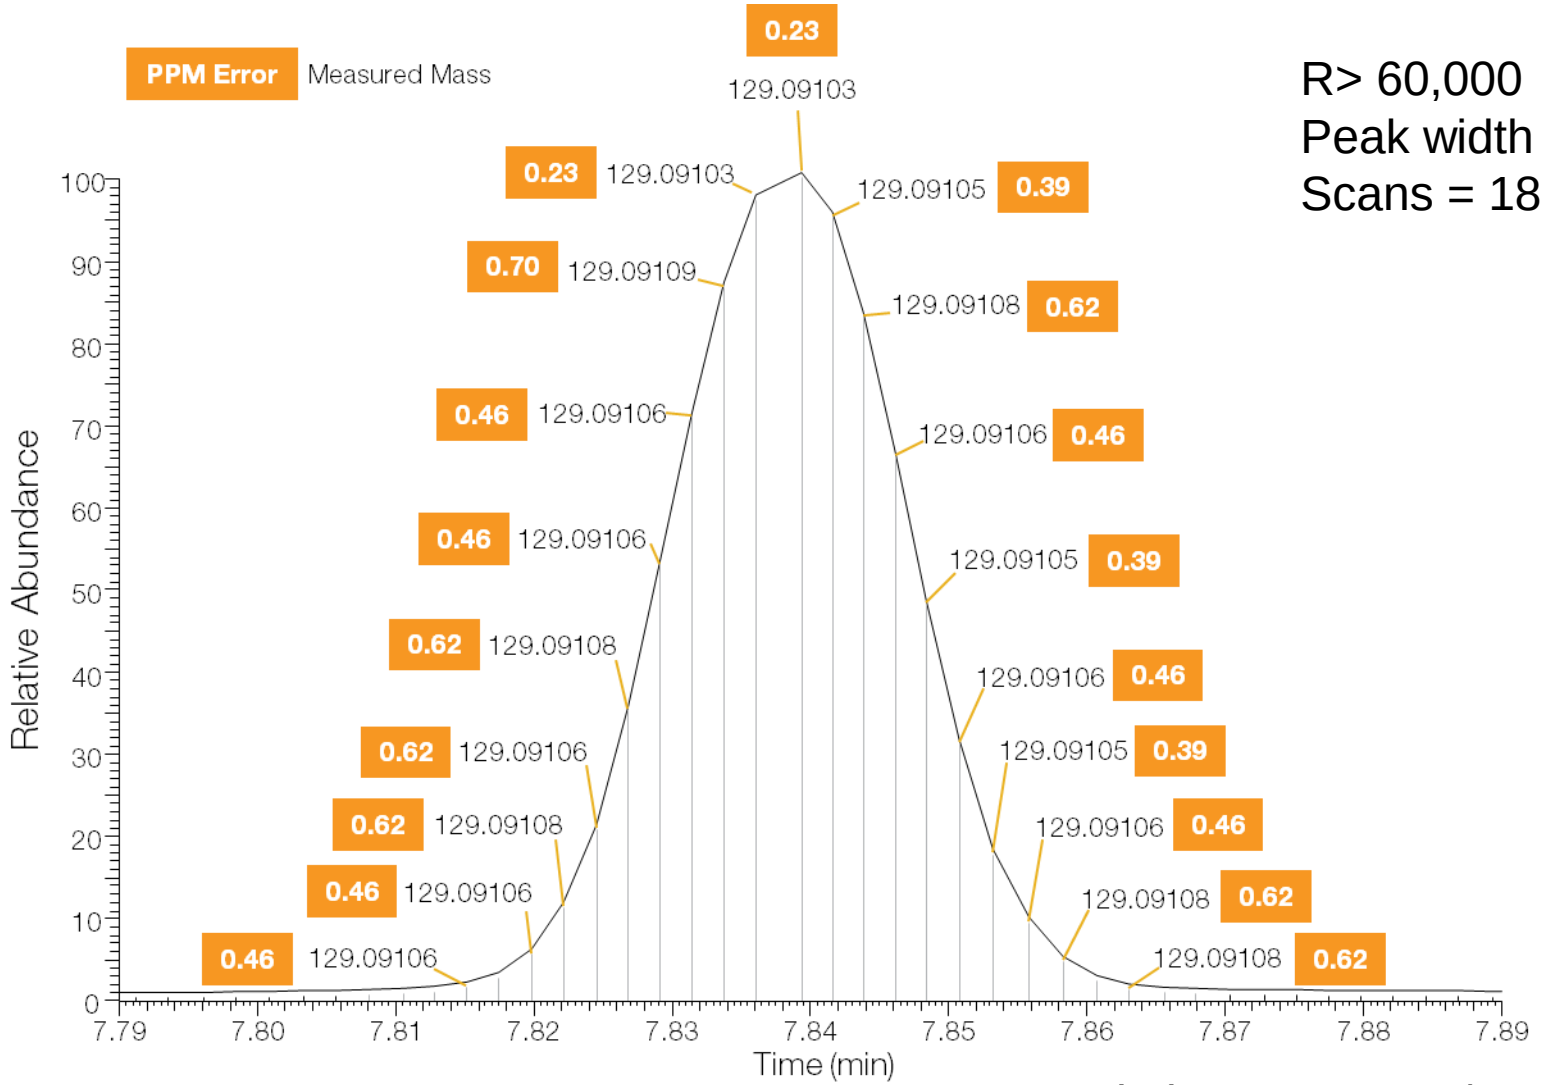


- In full scan
- High selectivity
- High spectral fidelity

Dynamic Range

- Excellent coverage in sample profiling
- "Triple quad grade" quantitation in full scan

Scan speed and accurate mass error across a peak



R> 60,000
Peak width = 3s
Scans = 18

Ethyl octanoate *m/z* 129.0910

ThermoFisher SCIENTIFIC

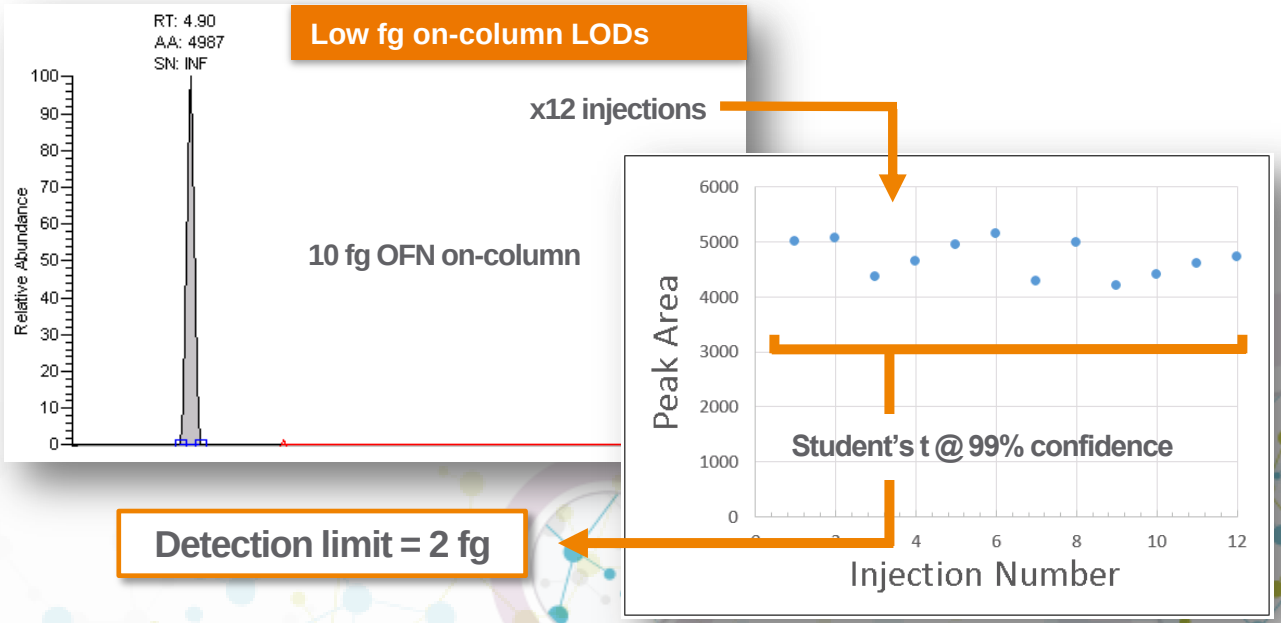
Unprecedented quantitation power for HR/AM GC-MS

PPT Sensitivity

Huge linear range

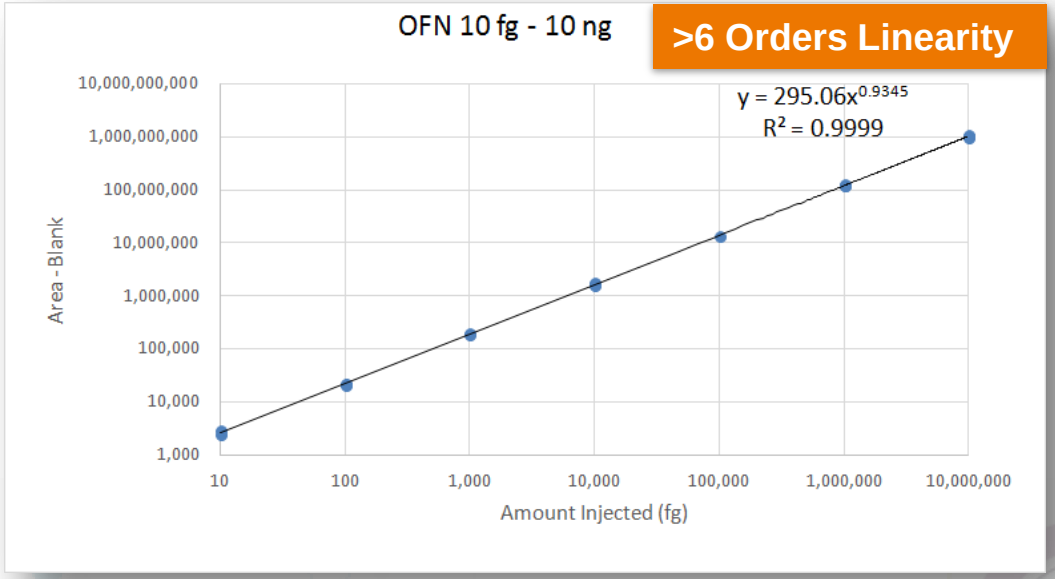
- Low fg on-column detection limits (~best triple quads)
- > 6 Orders linear range*
- Excellent precision
- Highest selectivity
- "triple quad grade" quantitation

*application specific



Breakthrough in GC-MS Performance

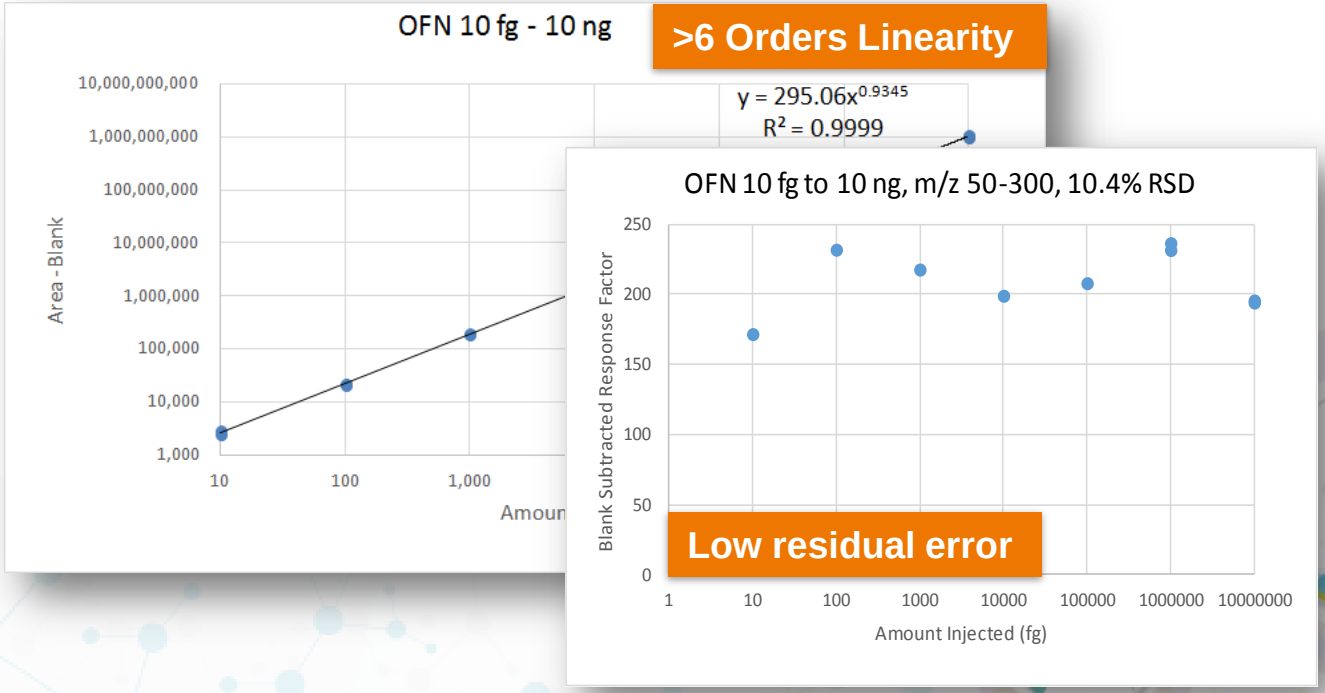
Unprecedented quantitation power for HR/AM GC-MS



ThermoFisher SCIENTIFIC

Breakthrough in GC-MS Performance

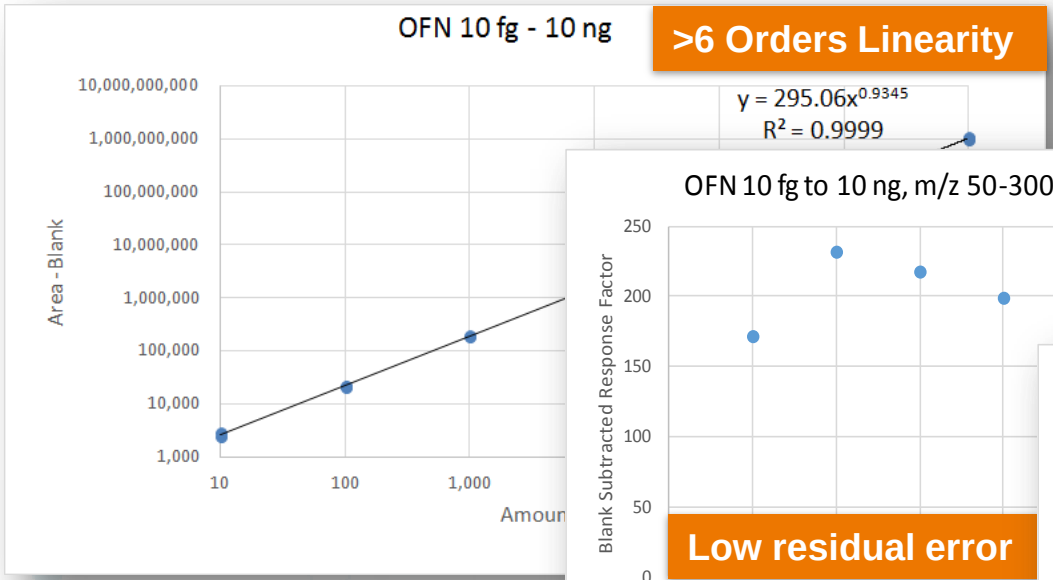
Unprecedented quantitation power for HR/AM GC-MS

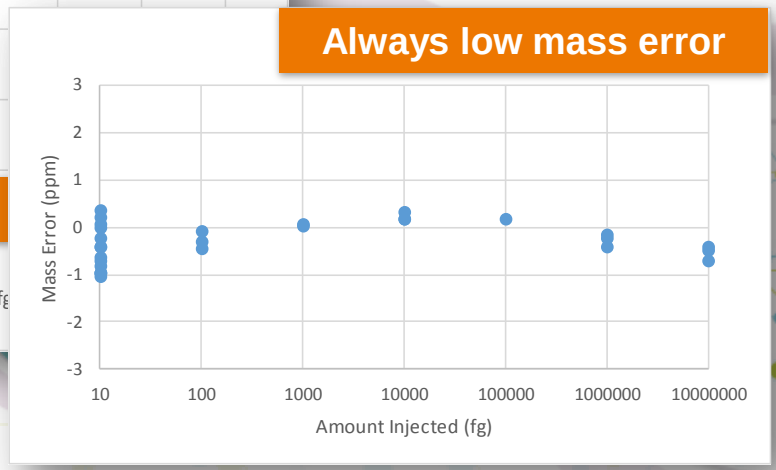


ThermoFisher SCIENTIFIC

Breakthrough in GC-MS Performance

Unprecedented quantitation power for HR/AM GC-MS

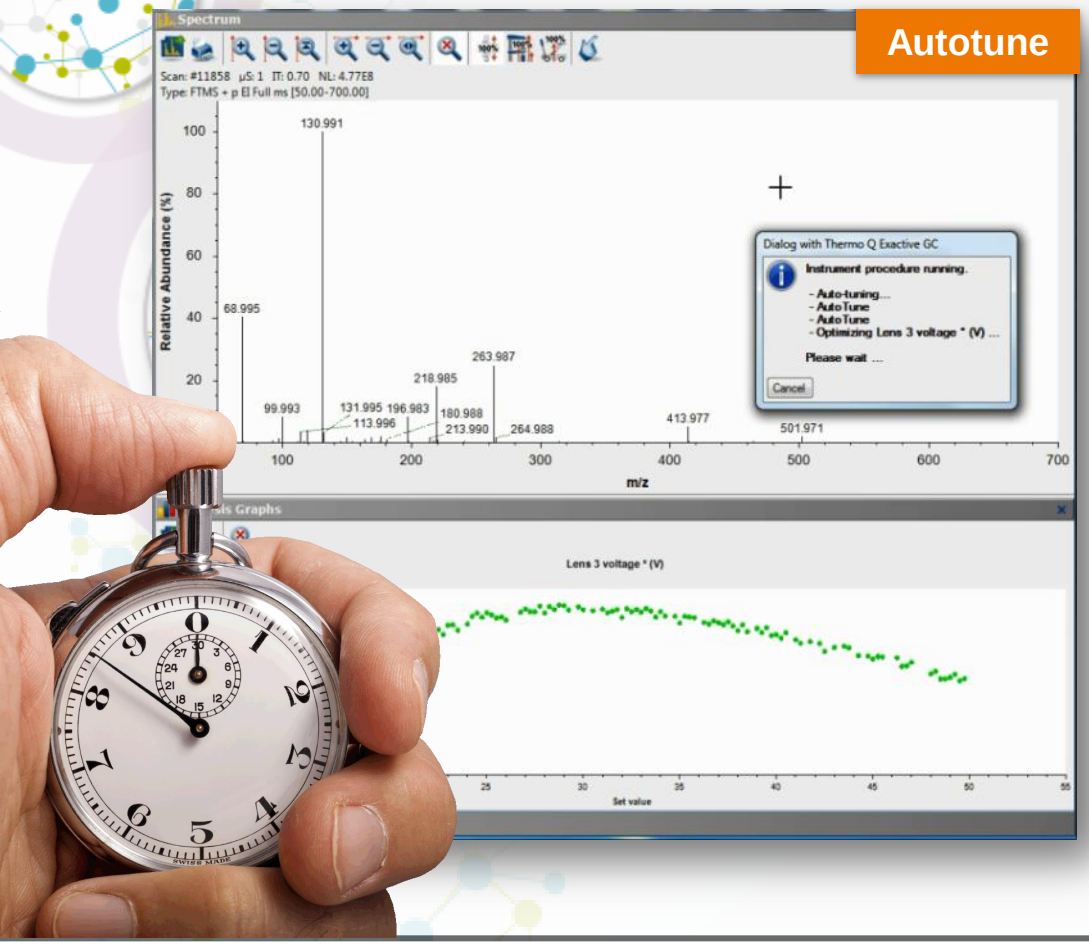




ThermoFisher SCIENTIFIC

Breakthrough in GC-MS Performance

To get data this good, it's really fast and simple…



Easy set-up

- Familiar Q Exactive environment
- Simple status
- Automated leak checking
- Automated tuning & calibration
- Source and lens tuning
- Mass calibration
- **Ready to go < 5 minutes**

ThermoFisher SCIENTIFIC

Results

“Impurity detection is important within the pharmaceutical industry. ***High mass accuracy is an advantage*** *when it come to looking at unknown sample impurities.”*

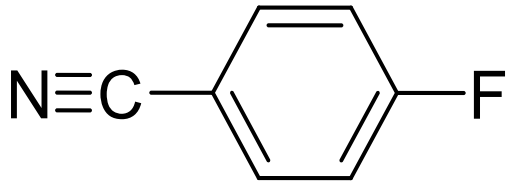
Mass Accuracy

- Aim: demonstrate mass accuracy across a range of test compounds:
  - *"All five compounds were identified by their elemental formula."*
  - *"Each was identified with a mass accuracy of less than **0.9 ppm**"*

Compound Analysed	Mass Accuracy ppm
	**0.6**
	**0.0**
	**0.9**
	**0.7**
	**0.1**

Scan Speed

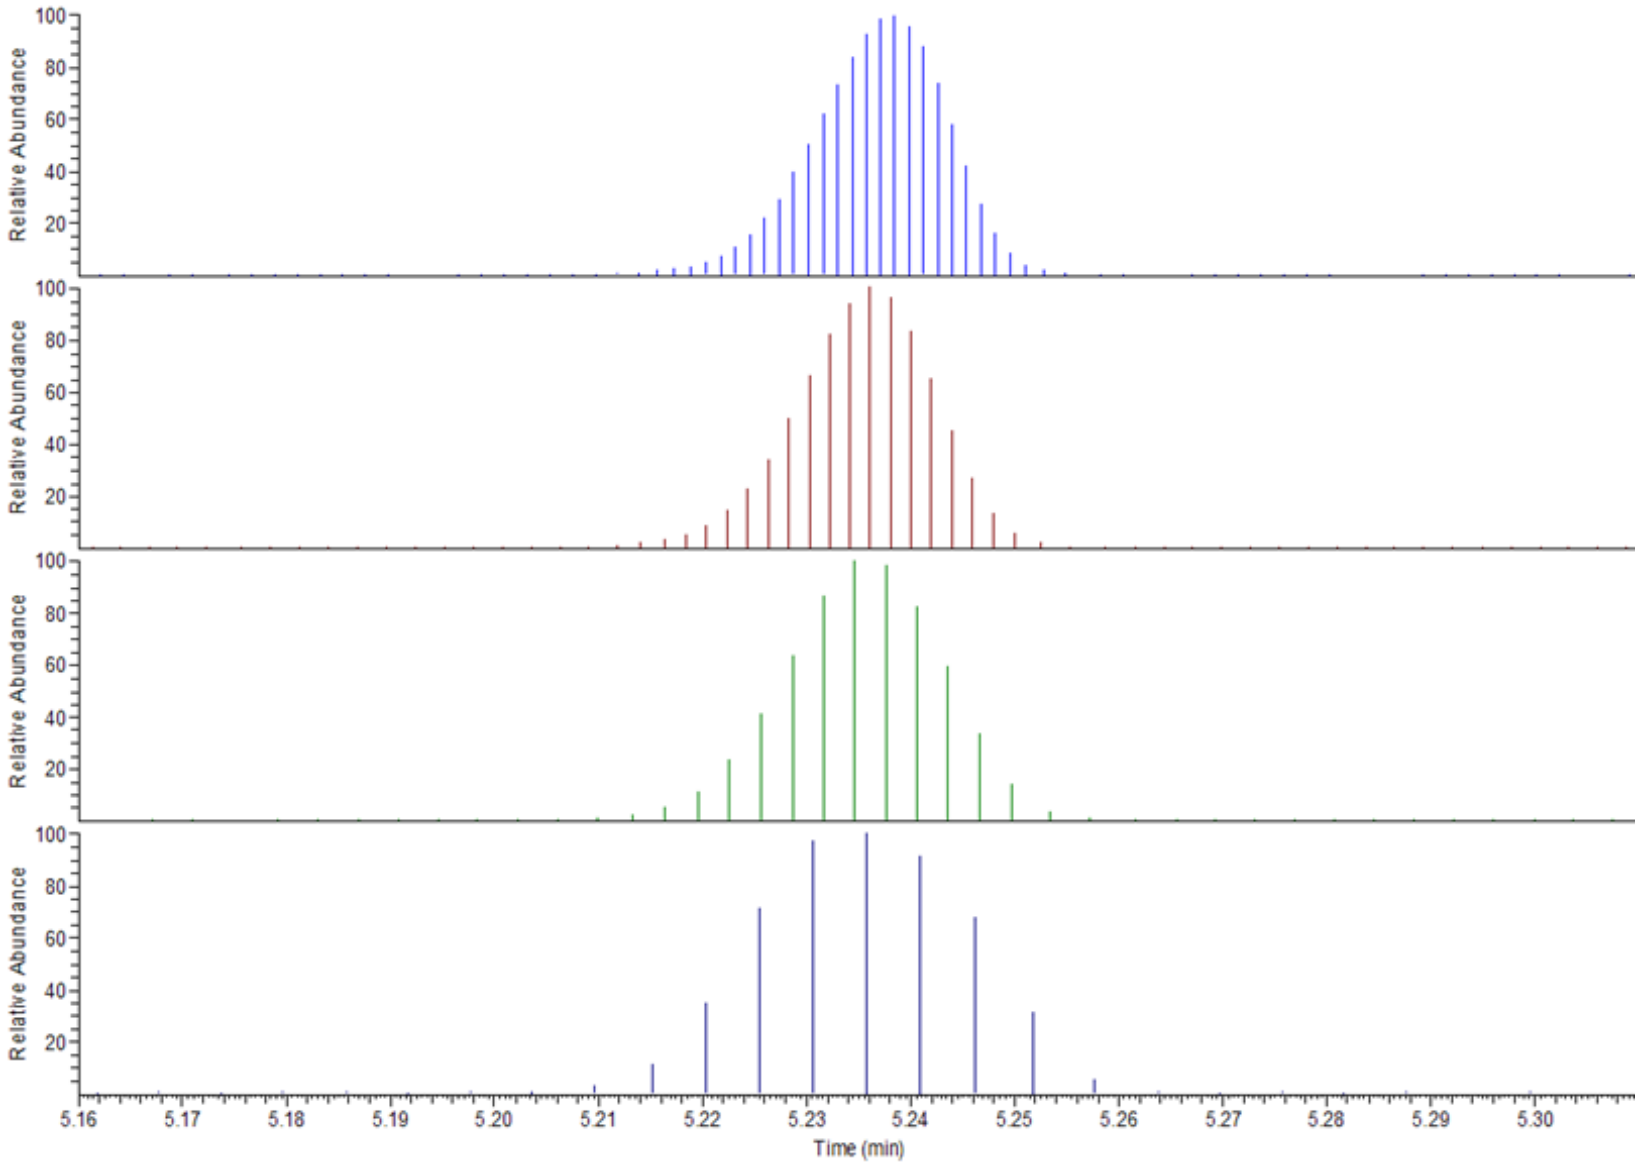
*"For quantitative analysis in GC/MS, a **minimum of 10 scans** is needed for an idealized peak shape."*



- 4-fluorobenzonitrile (2.5 µg/mL (w/v) in methanol) was analysed in CI mode.

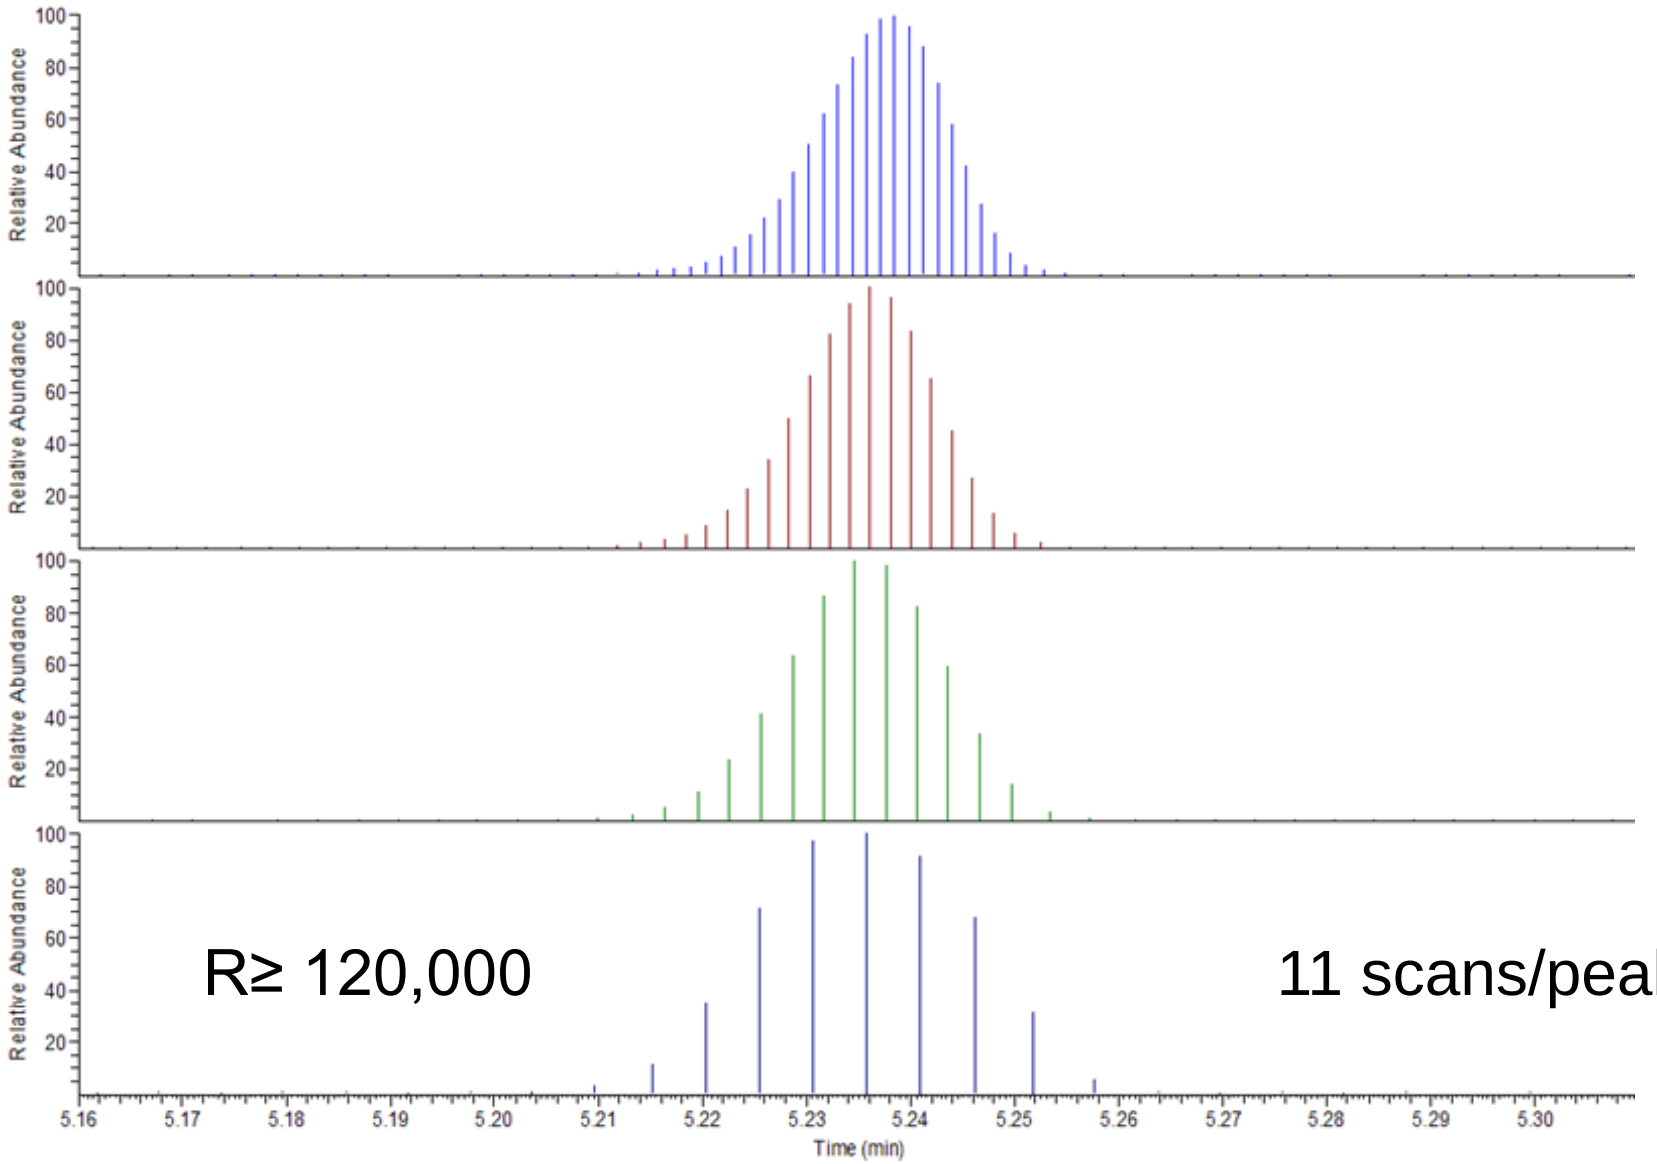
- The main component peak has a **peak width of 3.6 seconds**.

Scan speeds & data points



ThermoFisher SCIENTIFIC

Scan speeds & data points

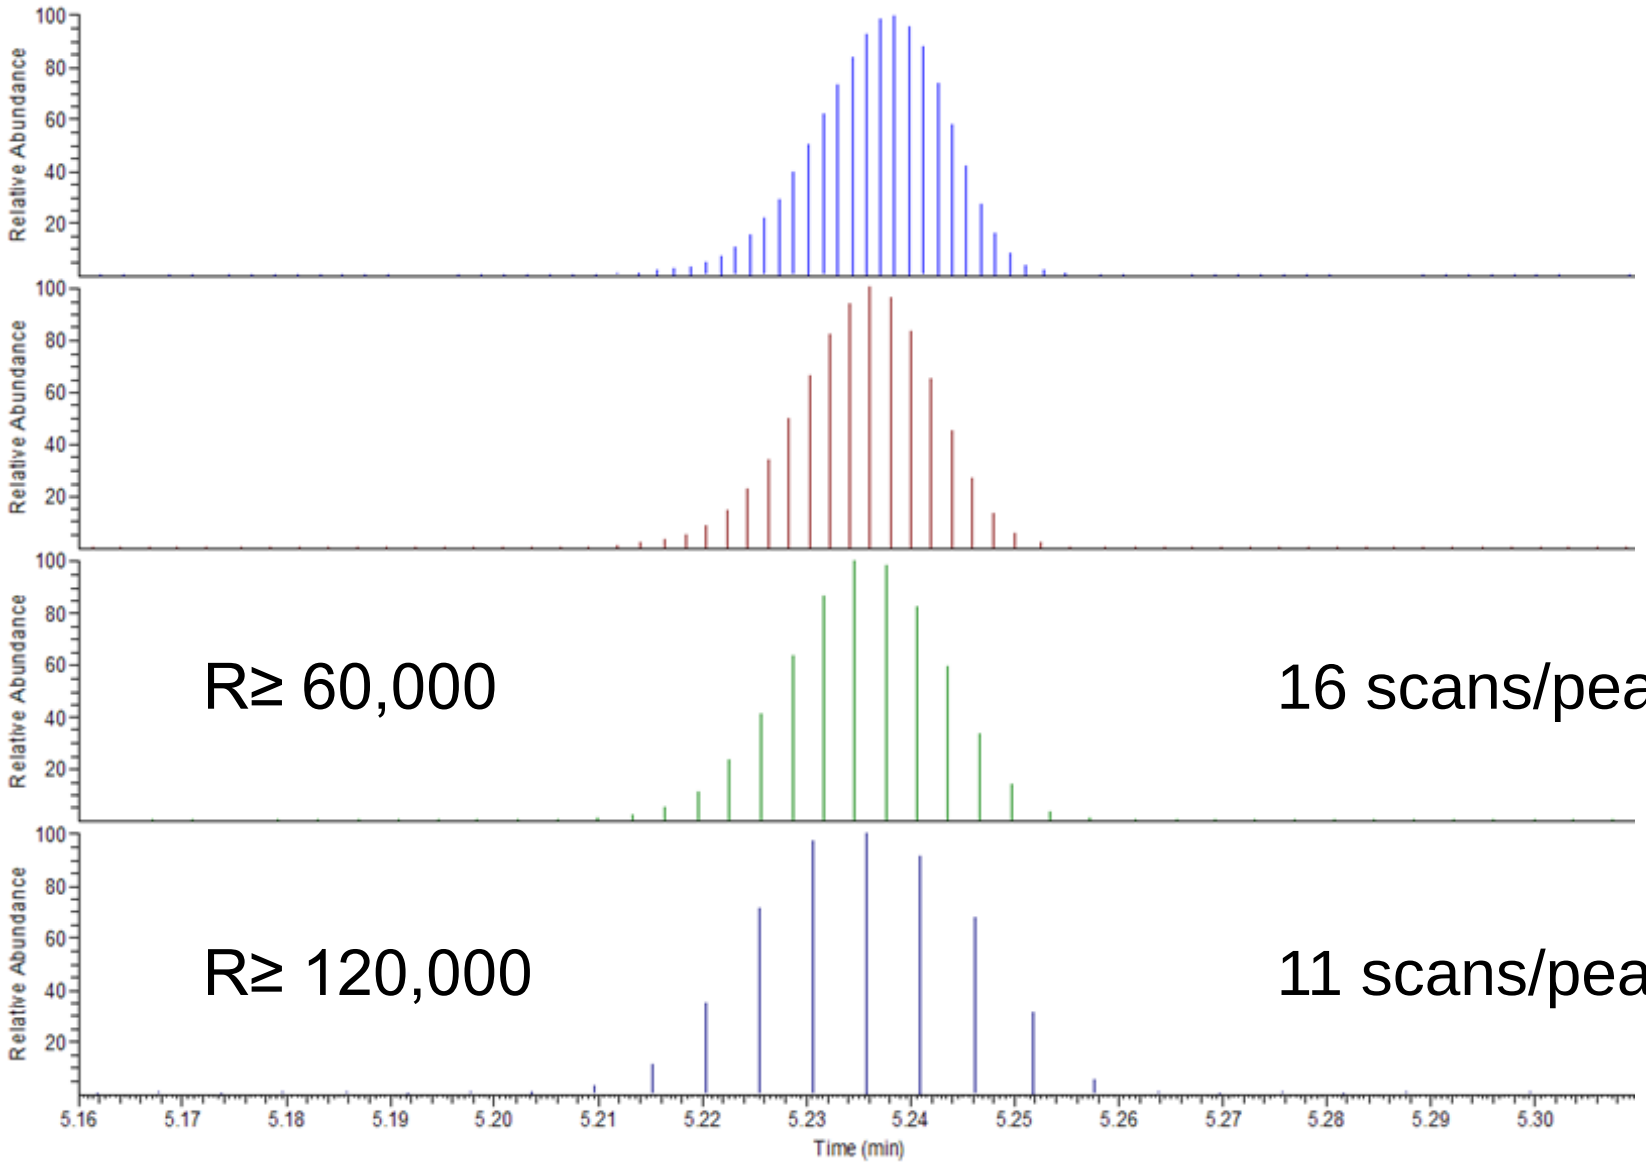


R≥ 120,000

11 scans/peak

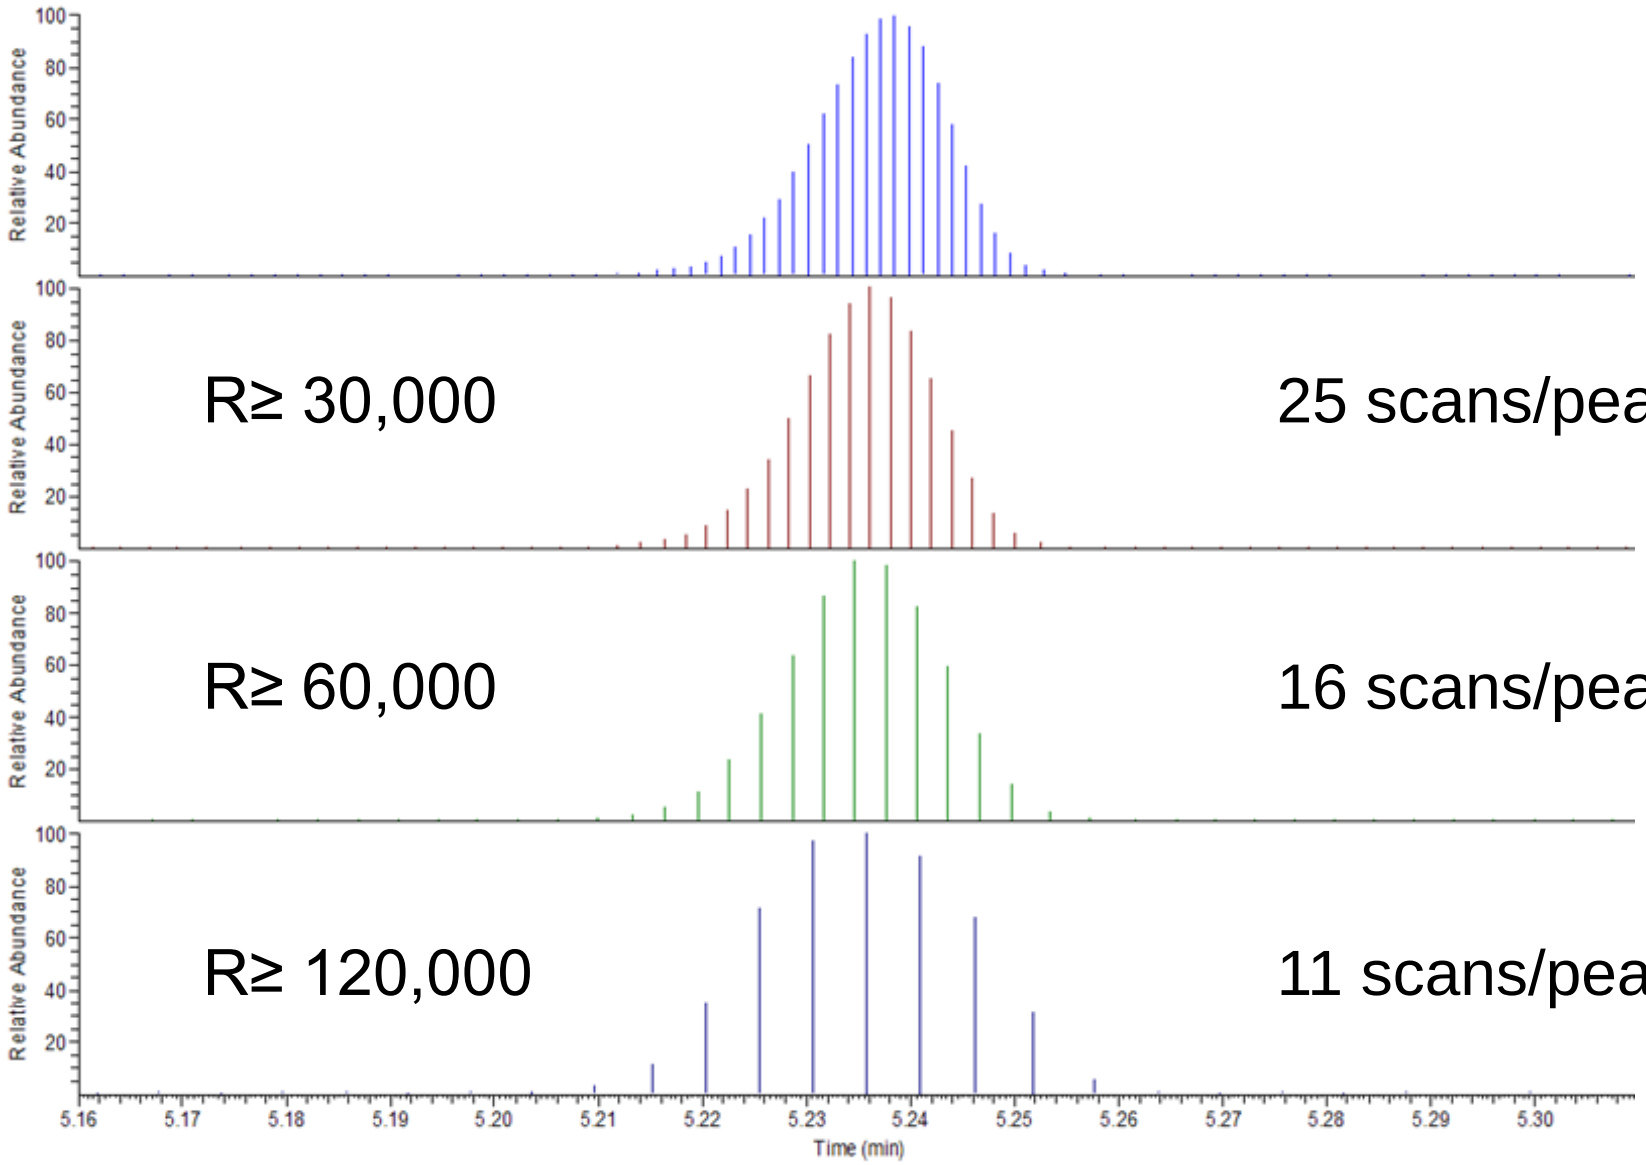
ThermoFisher SCIENTIFIC

Scan speeds & data points



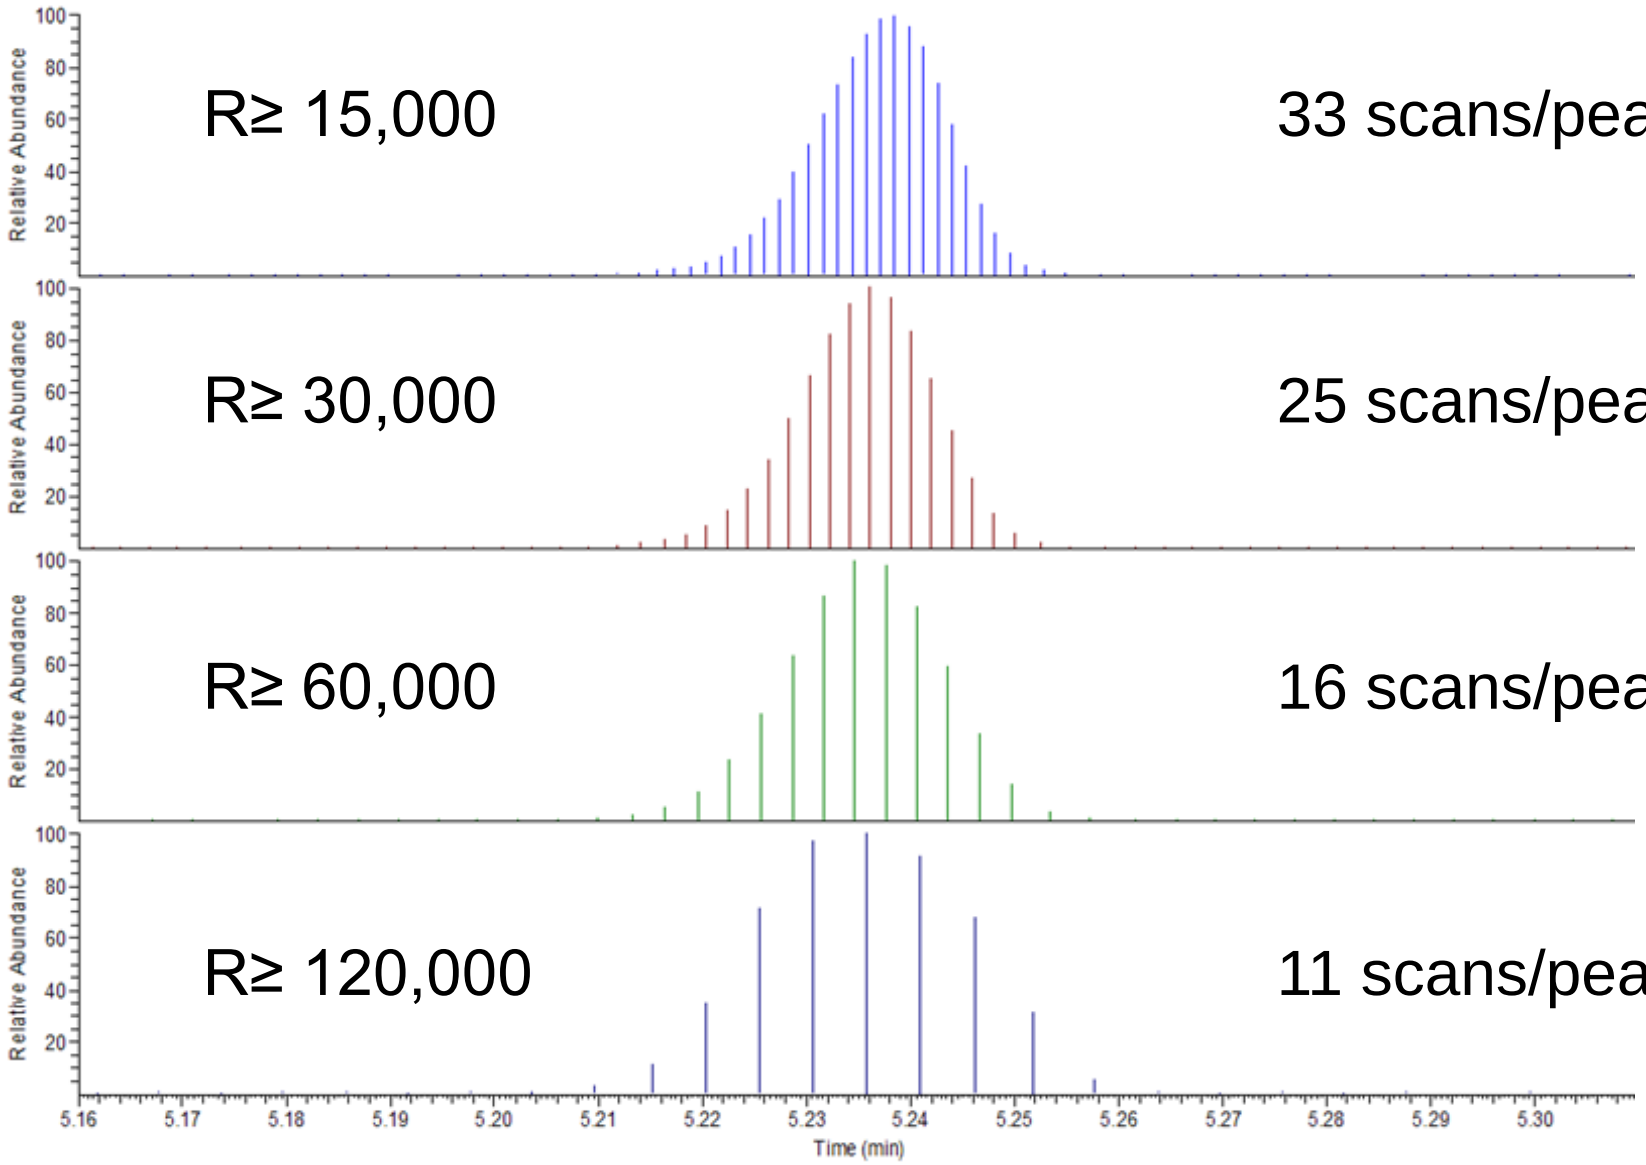
ThermoFisher SCIENTIFIC

Scan speeds & data points



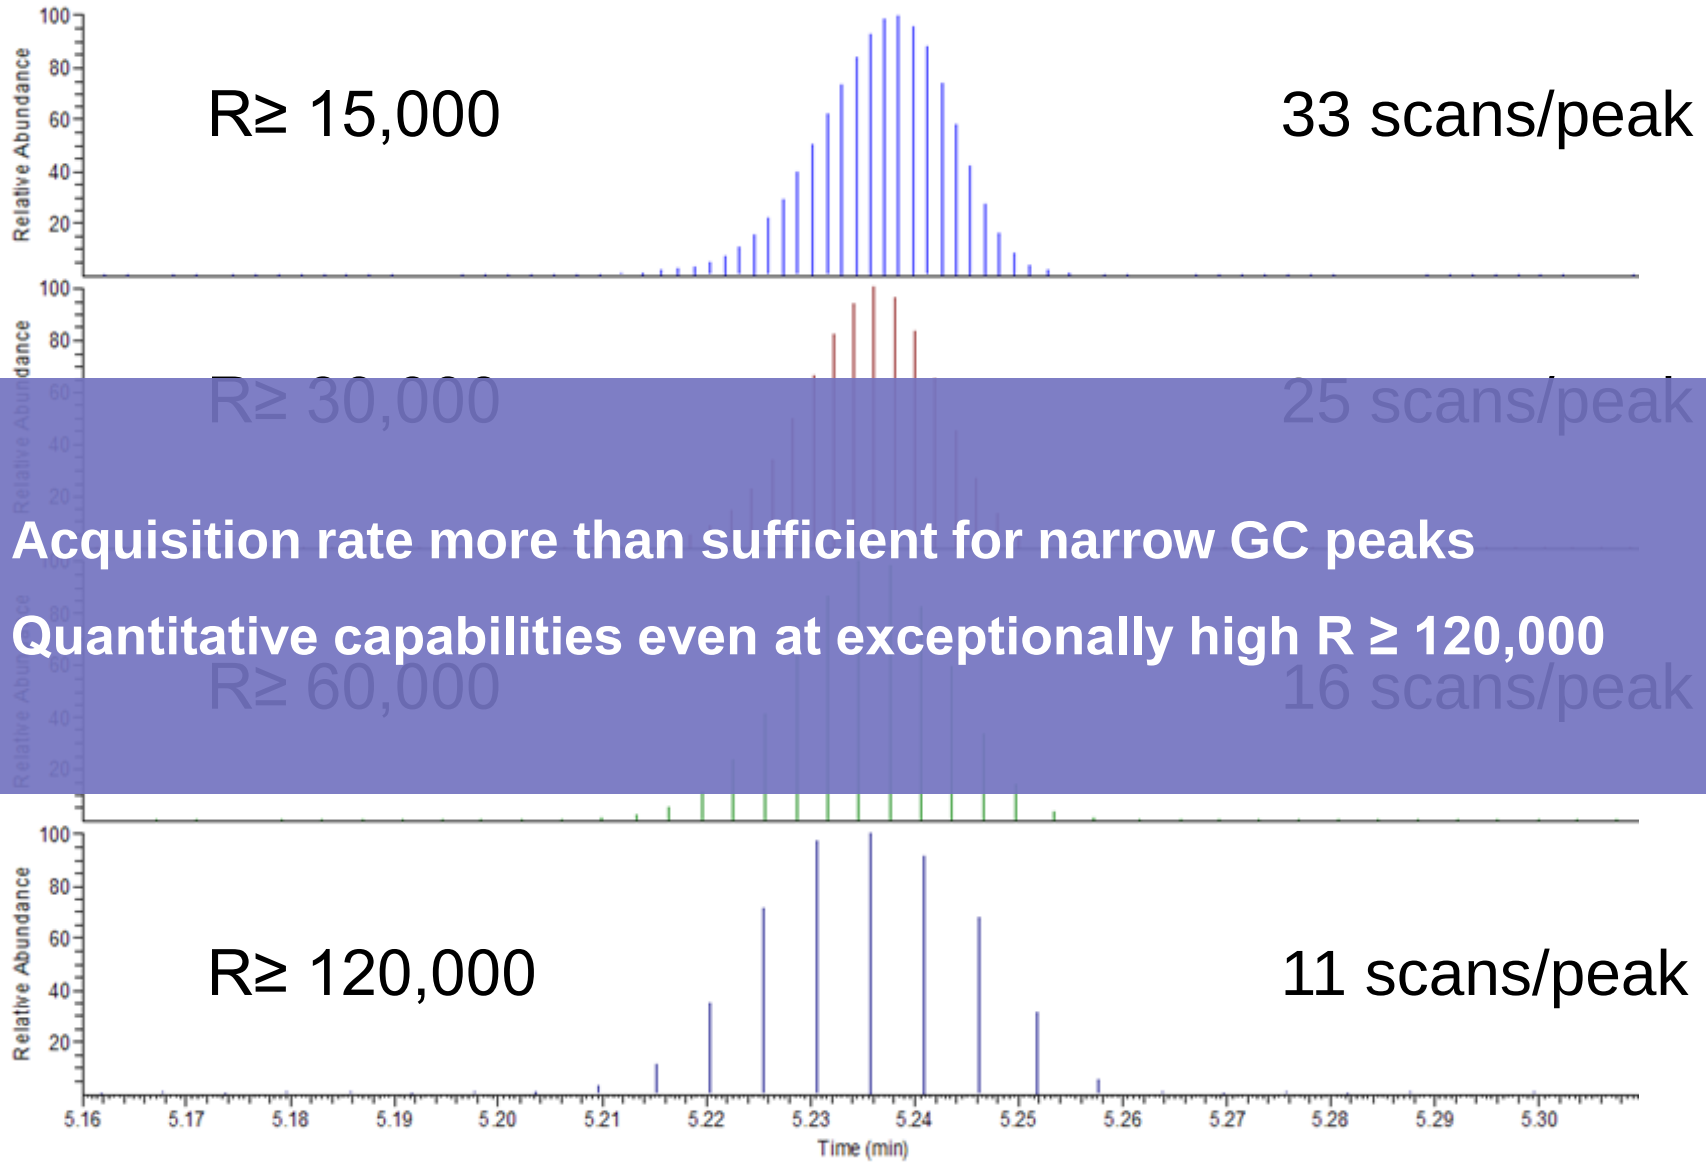
ThermoFisher SCIENTIFIC

Scan speeds & data points



ThermoFisher SCIENTIFIC

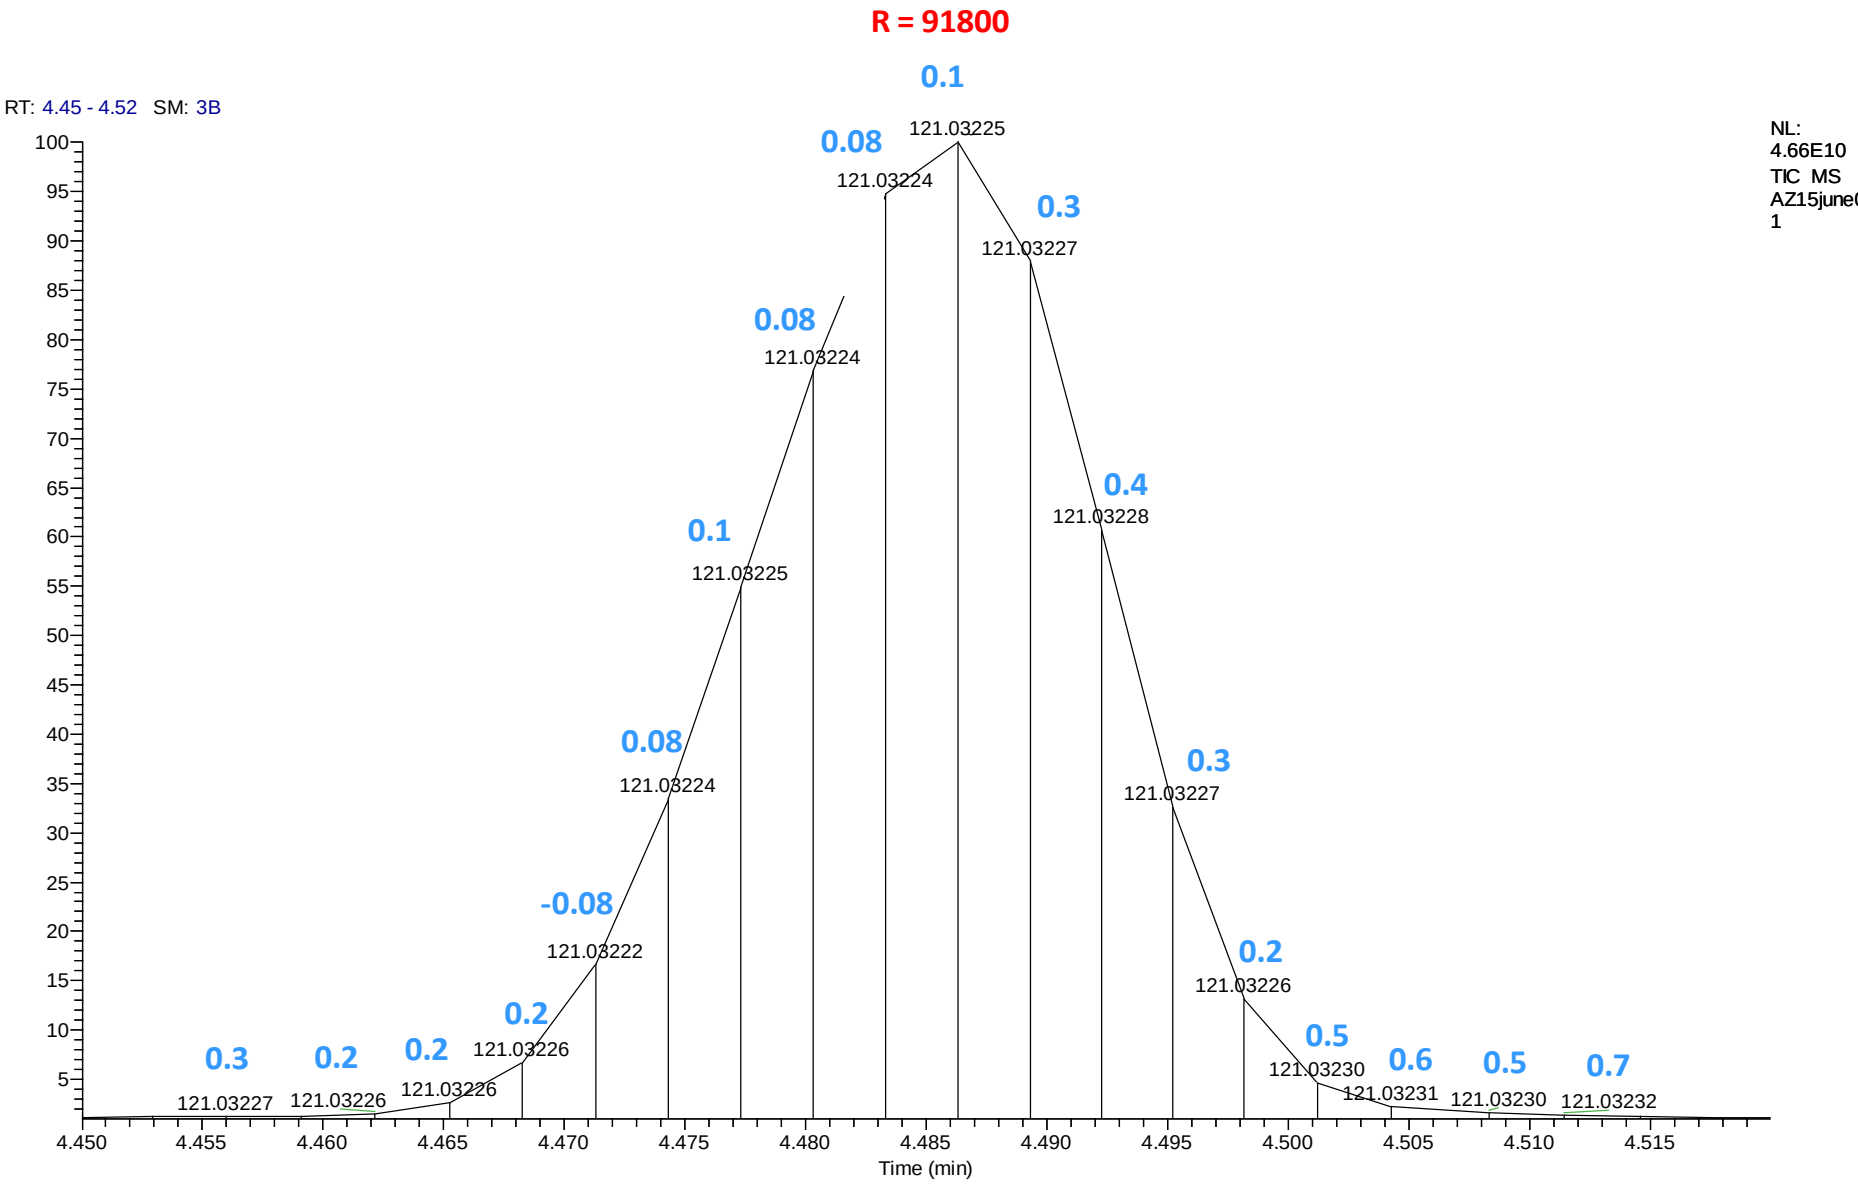
Scan speeds & data points



- **Acquisition rate more than sufficient for narrow GC peaks**
- **Quantitative capabilities even at exceptionally high R ≥ 120,000**

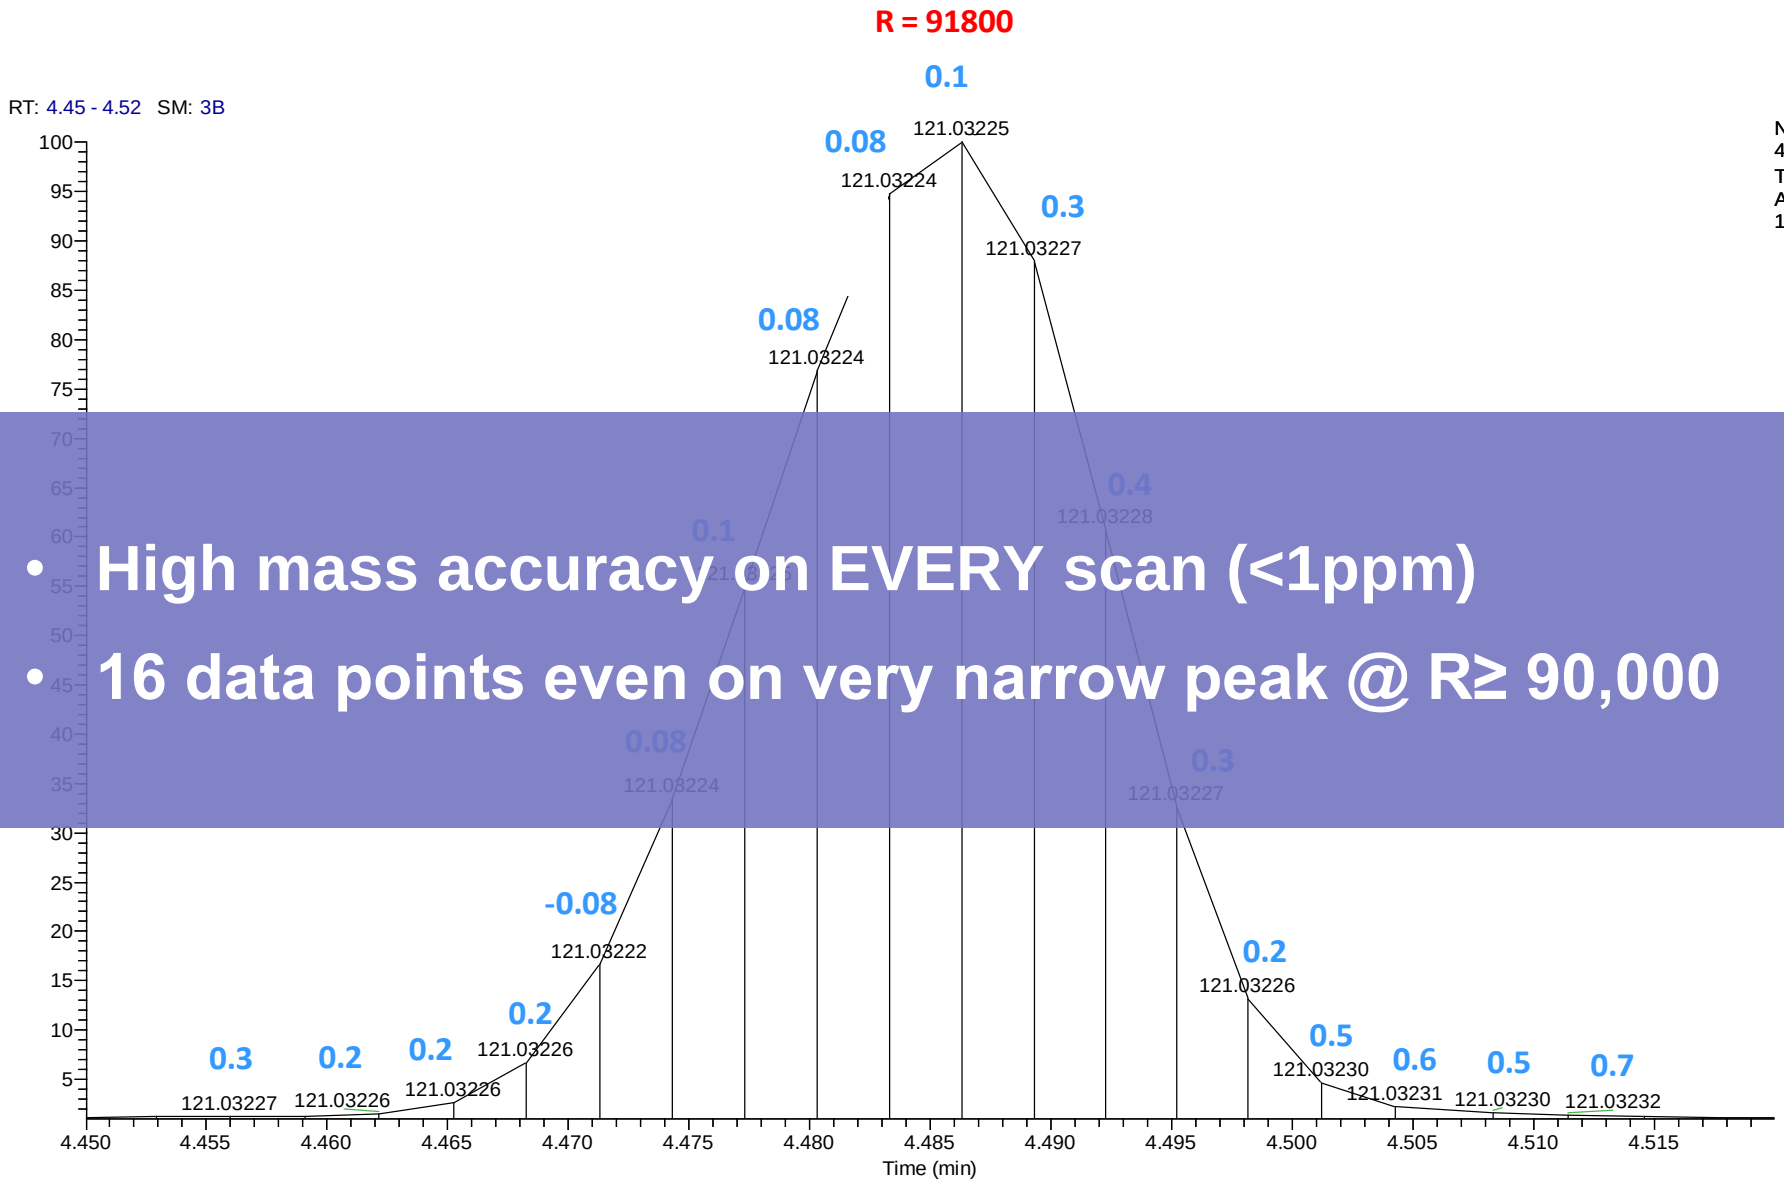
ThermoFisher SCIENTIFIC

Mass Accuracy Across the Peak



ThermoFisher SCIENTIFIC

Mass Accuracy Across the Peak



- **High mass accuracy on EVERY scan (<1ppm)**
- **16 data points even on very narrow peak @ R≥ 90,000**

ThermoFisher SCIENTIFIC

Linearity

- Aim: show linearity across relevant concentration range
  - Linearity of **N,N,N'-trimethylethylenediamine** across a concentration range of 0.0001 to 0.1250 % (v/v in DMSO).
  - Analysed at a resolution of **60,000 RP** (at *m/z* 200) using EI
  - Extracted ion chromatogram of m/z 102.11515 (mass window **2 ± ppm**) and corresponding peak area were used in calibration curve.

Linearity Results

Data Review - diamine01_cal
