Thermo Scientific Q Exactive Focus Orbitrap LC-MS/MS System

- Scan speed up to 12 Hz with Orbitrap Analyzer Technology for best screening and quantitative results
- Resolving power of up to 70,000 (FWHM) at m/z 200
- Routine sub ppm mass accuracy
- Linear Dynamic Range up to 6 orders of magnitude
- Multiple approaches to quantitation including Selected Ion Monitoring (SIM), Parallel Reaction Monitoring (PRM), and Data-Independent Acquisition (DIA)
- Polarity switching for maximum compound coverage
- Higher-Energy Collisional Dissociation (HCD)

The Thermo Scientific™ Q Exactive™ Focus benchtop LC-MS/MS combines quadrupole precursor ion selection and a high-resolution accurate-mass (HR/AM) Orbitrap mass analyzer to deliver mass accuracy, sensitivity and fast polarity switching while maintaining sensitivity compared to a triple quadrupole mass spectrometer.

The Q Exactive Focus mass spectrometer delivers qualitative and quantitative results every day. Perform routine identification, quantitation and confirmation in a single analysis with easy to use Thermo Scientific™ TraceFinder™ acquisition and processing software.

Based on the proven Q Exactive platform, the Q Exactive Focus provides durable and reliable performance for routine laboratories doing automated screening, profiling and quantification analysis of small molecule compounds. Full scan confirmation mode and parallel reaction monitoring (PRM) provide reproducible quantitation results and targeted screening capabilities. Variable data-independent analysis (vDIA) provides complete qualitative coverage for unknown screening without compromising proven quantitative attributes.

The Q Exactive Focus system provides best in class data quality at a value price. It is ideal for routine labs performing food safety residue analysis, environmental analysis, forensic toxicology, sports doping, clinical research, metabolomics, and pharmaceutical analyses.

vDIA method is not available in the United States of America.

*Under defined conditions

**Hardware Specification**

**Thermo Scientific Ion Max API Source**
- H-ESI II probe with dual desolvation zone technology
- Sweep gas to reduce chemical noise
- 60° interchangeable ion probe orientation
- Removable metal ion transfer capillary provides vent-free maintenance

**Ion Optics**
- RF lens stacked-ring radio frequency ion guide captures and efficiently focuses the ions into a tight beam. Large variable spacing between electrodes allows for better pumping efficiency and improved ruggedness.
- Bent flatapole ion guide reduces noise by preventing neutrals and high-velocity clusters from entering the quadrupole

**Quadrupole Mass Filter**
- Thermo Scientific™ HyperQuad™ mass filter provides increased ion transmission
- Variable precursor ion isolation width selection from 0.4 Da to full mass range

**Vacuum System**
- Differentially pumped vacuum system with final vacuum $<1 \times 10^{-9}$ mbar
- Two split-flow turbomolecular pumps and one rotary vane pump
- Seven vacuum regions

**Orbitrap Mass Analyzer**
- Nitrogen-filled C-Trap
- Highly efficient ion transfer to Thermo Scientific™ Orbitrap™ mass analyzer
- Straight multipole collision cell for HCD
- Orbitrap mass analyzer with 5 kV central electrode voltage
- Low-noise image current preamplifier
- 16-bit signal digitalization

**Data Acquisition**
- Ultrafast real-time data acquisition and instrument control system
- Fully automated calibration via instrument control software
- Automatic Gain Control

Options
• ESI probe compatible with liquid flow rates of <1 μL/min to 1 mL/min without splitting
• APCI source compatible with liquid flow rates of 50 μL/min to 2 mL/min without splitting
• APCI/APPI source compatible with liquid flow rates of 50 μL/min to 2 mL/min without splitting
• Metal needle kits for high- and low-flow analyses

Software Features
Data System
• High-performance PC with Intel® microprocessor
• High-resolution LCD color monitor
• Microsoft® Windows® 7 operating system
• Microsoft Office software package
• Thermo Scientific™ Xcalibur™ instrument control and data processing software
• Workflow-based method editor

Operation Modes
• Full MS with high-resolution accurate-mass detection
• Selected Ion Monitoring (SIM) with high-resolution accurate-mass detection
• Parallel Reaction Monitoring (PRM) for improved screening and quantitative confidence
• Data-Independent Acquisition (DIA) for unbiased identification and quantitative analysis
• All-Ion Fragmentation (AIF) in the HCD collision cell with high-resolution accurate-mass detection
• In-source fragmentation of all ions
• Positive/negative ion switching on chromatographic timescale
• On-the-fly data-dependent decision making
• Timed SIM for scheduled data acquisition of the targets of interest

Exclusive Technologies
• Automatic Gain Control (AGC) ensures that the Orbitrap mass analyzer is always filled with the optimum number of ions for all scans
• High-performance HCD collision cell for highest performance MS/MS fragmentation
• Collision energy profiling using different collision energies for HCD fragmentation
• Advanced signal processing
• Interleaved operation
Installation Requirements

Power

- 2 × 230 VAC ± 10% single phase, 15 A, 50/60 Hz, with earth ground for the instrument
- 120 or 230 VAC single phase with earth ground for the data system

Gas

Nitrogen

- High-purity nitrogen gas supply
  (99% pure at 800 ± 30 kPa (8.0 ± 0.3 bar, 116 ± 4 psi))

Environment

- System averages 2500 W (~9000 Btu/h) output when considering air conditioning needs
- Operating environment must be
  15–26 °C (59–78 °F) and relative humidity must be 40–70% with no condensation

Weight

- Q Exactive Focus mass spectrometer: 182 kg (400 lbs) without forevacuum pump
- Forevacuum pump: 62 kg (136 lbs)

Dimensions

- Q Exactive Focus mass spectrometer:
  (h × d × w) 95 × 83 × 91 cm
  (37 × 33 × 36 in.)
