

Ryan Lutz, Assoc. Prin. Scientist, Merck & Co, Inc.
www.merck.com

We were able to achieve a similar quality result (LLOQ and linearity) in a few hours as compared to our typical two business day immunoaffinity purification and digestion protocol.

How has the Thermo Scientific™ SMART Digest™ Kit helped you solve a problem and achieve results?

We compared the SMART Digest ImmunoAffinity kit to results that are typically achieved with a more time and labor intensive immunoaffinity purification and trypsin digestion protocol. For the mAb evaluated, the kit produced similar results in significantly less time.

How have you found the following when using SMART Digest kits:

- a. Speed
- b. Ease of use
- c. Reproducibility
- d. Quality of results
- e. Anything else...

Following the generic protocol included with the kit, we were able to achieve a similar quality result (LLOQ and linearity) in a few hours, compared to our typical two business day immunoaffinity purification and digestion protocol. In addition to the advantage of speed, the kit was easy to use with fewer reagents overall.

How has the SMART Digest kit helped improved your workflow?

The kit has potential to streamline our standard immunoaffinity and digest protocol and reduce sample preparation time.
