Compounding insights
Thermo Scientific Compound Discoverer Software
Integrated, complete, toolset solves small-molecule analysis challenges

Thermo Scientific™ Orbitrap™ mass spectrometers produce information-rich data. The challenge for small-molecule analysis is to efficiently extract high-confidence understanding from this comprehensive data, without need for an expert user.

Thermo Scientific™ Compound Discoverer™ software solves this challenge. With a comprehensive, integrated set of libraries, databases, and statistical analysis tools linked in customizable workflows, the software streamlines unknown identification, determination of real differences between samples, and elucidation of biological pathways.
Sample to structure; pathways to insight

Know more unknowns
- Identify compounds using MS/MS libraries
- Determine elemental composition using high-resolution full MS isotopes and MS/MS data
- Search online chemical databases

Go from spectra to structure
- Perform spectral library and similarity searches to identify compounds
- Search chemical databases for putative candidates
- Annotate spectra with predicted fragmentation, automatically

Find real differences
- Perform statistics and differential analysis using t-tests, ANOVA, PCA, PLS-DA, volcano plots, box-and-whisker plots, and more
- View trend charts to visualize peak areas, average peak area per group or fractional label incorporation over time
- Review heatmaps of peak areas, CV values, adjusted p-values, and more
Supports a breadth of applications

**Impurities and degradants**
Identification of impurities and degradation products in drugs and foods is a critical aspect of product safety testing. Compound Discoverer software tools and customizable approaches enable confident detection of related components in complex samples.

**Environmental and food safety**
Food and environmental fate studies, and the analysis of contaminants in soil and water, often require identification of unknown compounds. Compound Discoverer software is ideally applicable to the analysis of metabolic fate and unknown compound identification of food and environmental degradants and contaminants.

**Metabolite identification**
The detection of related components in biological samples and the subsequent determination of their structures are key aspects of research. Compound Discoverer software allows you to find, identify and flexibly report metabolites of interest.

**Forensic toxicology**
Targeted screening applications only find what is targeted. Compound Discoverer software enables forensic toxicologists to find unknown metabolites of drugs of abuse and structurally related designer drugs. This information can then be transferred back to screening methods to help you keep up with an ever-expanding array of new drugs and their metabolites.

**Metabolomics**
By integrating the tools necessary to determine components of interest in large complex metabolomics datasets, Compound Discoverer software offers a solution for quickly finding and identifying important statistical differences between sample sets. Compound Discoverer software also provides easy visualization of fractional label incorporation over time on metabolic pathways, eliminating the tedious manual steps used to examine the production and consumption of metabolites during qualitative flux analyses.

---

**Understand biological pathways**
- Perform stable isotope labeling (“metabolic flux”) experiments
- View pathways using Thermo Scientific™ Metabolika™, KEGG, and BioCyc databases
- Map detected compounds, statistical data and fractional label incorporation to pathways
Speed, simplicity, and flexibility match your requirements

Easily customizable workflows
Compound Discoverer software empowers data processing with its customizable workflows. Drag and drop workflow nodes from an extensive list of processing tools into workflow trees that specify your desired data flows. Save your workflow as a template or pick from many pre-made templates to simplify setup.

Get up and running quickly with the Study and Analysis Wizard. Add your data, define your study and sample groups, pick a workflow template and start processing. You can also save time by partially re-running a workflow if needed.

Interactively linked results
Compound Discoverer software makes it easy to visualize results in a meaningful way. Customizable data visualization allows you to review only the data you choose. Configurable layouts let you quickly change between views. Multiple monitor support ensures that you can view more data at once.

“Compound Discoverer software is a powerful, versatile, and easy-to-use solution for MS-based isotopic labeling studies. Implementation of the software has drastically reduced our lead time and improved the impact of our research.”

Juan Moises Sanchez, — Associate Scientist, Bioanalytical Chemistry, Intrexo
Share results with tailored reporting

Powerful data-processing tools quickly create valuable results, but these results and supporting information must also be shared. Compound Discoverer software provides customizable reporting so results can be easily transferred to others that need them. Multiple output formats also allow you to transfer data to informatics software.

Tailored reporting helps you make real use of results.
Know more unknowns

Unknown identification is one of the toughest challenges in many small-molecule analyses. By integrating multiple tools for gathering identification information, Compound Discoverer software enables you to identify more of your unknowns.

Automatically identify components

Automatically identify more unknowns faster with spectral library searching against both the online mzCloud™ spectral library and in-house Thermo Scientific™ mzVault™ spectral libraries without leaving the Compound Discoverer software environment. Fragmentation spectral library searches can provide identifications. Additionally, mzCloud can provide similarity search results, giving you even more information to use for unknown identification. You can even export spectra of interest to save in mzVault directly from Compound Discoverer software.

Determine elemental composition, including fine isotopes, using HRAM MS and MS/MS data. Then, use this information to search multiple chemical databases for further annotation information.

Elucidate structures

Compound Discoverer software simplifies determination of compound structure by predicting and displaying fragments onto spectra using the built in HighChem Fragmentation Library of reference fragmentation mechanisms. This feature allows annotation of either expected compounds such metabolites, impurities, or breakdown products, and of putative structures supplied by chemical databases or the user.

Automatically identify unknown compounds using the mzCloud spectral library, without leaving Compound Discoverer software.

Structurally annotated peaks provide more certainty in results and allow visualization of modified portions of expected compounds.
Rank order putative results

Database searches alone only produce putative candidates for identification. With the new mzLogic algorithm, you can use the extensive fragmentation spectral information in mzCloud to rank order putative database results. Combining mzCloud similarity searching with structure similarity matching provides improved candidate ranking.

Comprehensive mzCloud advanced mass spectral library

mzCloud is the world’s most extensively curated mass spectral fragmentation library. Beyond generating matches for identification, integrated batch searching of mzCloud can also produce similarity matches. Searching makes use of stepped collision energy scans to automatically model results using the library’s multiple energy levels of reference fragmentation data.

mzCloud

- Extensively curated online library
- Includes compounds relevant to all applications
- Highly-curated, highest-quality data
- Multiple energy levels represented
- Supports both research and targeted screening workflows
Compound Discover software supplies a suite of tools—KEGG and BioCyc, and Metabolika biological pathway databases, advanced statistics, hypothesis testing, and flexible visualization of complex data—that take you far beyond compound detection, enabling you to understand complex systems. These tools build on the certainty provided by the identification and structural elucidation capabilities of Compound Discoverer software, because confidence in pathway analysis is dependent on the confidence in underlying identifications.

Find and visualize real differences

Whether you are performing metabolomics research or looking for emerging environmental contaminants, the powerful Compound Discoverer software toolset enables you to quickly find real statistical differences—the differences that matter—between sample sets. Quickly view trends in components across a study, or identify the key components of interest between multiple sample groups using interactively linked displays. Move quickly from high-level PCA visualizations to individual components with one click.

Capabilities

- Interactive differential analysis; PCA; ANOVA; volcano, box-whisker, and trend line plots; PLS-DA; and t-tests
- Visualization of fractional label incorporation for multiple samples (isotopologue plot) and for trends over time (trendline chart)
- Heat map-like tables are included for normalized and original peak areas, ratios, two-fold log change, CV values, p and adjusted p-values
- Pathway mapping and visualization using Metabolika, KEGG, and BioCyc
- Interactive heatmaps with hierarchical clustering
- Powerful and flexible result table filtering, along with automatic background removal

33 compounds were selected (blue) in the Volcano plot based on p-value (ANOVA, Tukey test) and fold change (A). The same set of compounds is automatically highlighted in the S-plot (B) of the PLS-DA and the heat map (C). When clicking on a point in a plot, Compound Discoverer will navigate to the corresponding compound in the table and display XIC and spectrum.
Streamline stable isotope labeling flux analysis

Stable isotope labeling experiments (qualitative flux analysis) are fundamental to understanding metabolic pathways and fluxes. Compound Discoverer software makes full use of HR Orbitrap mass spectrometer data to offer advanced, streamlined untargeted workflows for stable isotope labeling. Using an unlabeled reference sample, Compound Discoverer software automatically detects all compounds, determines their elemental composition, and identifies their labeled counterparts in labeled samples. Any isotopic label can be used and the label is the only user-entered parameter required for automatic isotopologues detection.

Compound Discoverer software reports the fractional label incorporation (exchange rate) after natural abundance correction for each compound. The exchange rate and other statistical data can be overlaid onto pathways using Metabolika, which is integrated with Compound Discoverer software.

Succinic acid, EC=C4 H6 O4, MW=118.02644, RT=2.804 min

Compound Discoverer software supports untargeted stable isotope labeling workflows with visualizations of fractional label incorporation. Left-to-right: Details for fractional label incorporation (exchange rate) for isotopologues of succinic acid (C4H6O4) across 15 samples; isotopologue plot showing exchange rates for isotopologues of succinic acid measured for four samples; Metabolika pathways showing a detail of the TCA cycle with data overlay of the overall exchange rates measured across 4 sample groups with multiple replicates.
Try before you buy: Compound Discoverer software

Whether you are a new user or upgrading, try the latest version of Compound Discoverer software to experience the only software that fully utilizes data generated by HRAM Thermo Scientific Orbitrap mass spectrometers at thermofisher.com/compounddiscovererfreetrial

mzVault updates

Compound Discoverer software ships with the latest revision of the mzVault spectral library. Approximately every 6 months, Thermo Fisher Scientific provides an updated local mzCloud library as an mzVault database file, which you can access at thermo.flexnetoperations.com.

Orbitrap LC-MS systems

Thermo Scientific offers a wide portfolio of Orbitrap-based MS systems, including systems combined with ion traps and quadrupole mass filters, to address all your analysis needs.

thermofisher.com/orbitrap

System requirements

Windows® 7 Pro 64 bit or Windows® 10 64 bit

Testing configuration should include Microsoft Office 2010, 2013 or 2016.

Minimum computer requirements

3.2 GHz Processor (minimum of 1700 MHz to install software)

16 GB RAM (minimum of 2 GB to install software)

500 GB Hard Drive (minimum of 30 GB to install software)

Recommended Data Processing PC

IntelCore i7 3930x @ 3.2 GHz processor (or equivalent)

32 GB RAM

1 TB Solid State Disk (SSD)

Hard Drive for the OS

3 TB Conventional Disk Hard Drive for Data Storage

DVD/R-ROM

Display Monitor Resolution of 1920 x 1080
