

Better PFAS sample prep. Safer drinking water.

Improve your SPE process for preparing PFAS samples

PFAS contamination affects drinking water causing the need for testing to rise. Preparing PFAS samples manually is time-consuming, and without the correct instrumentation and processes, background contamination and potential errors can negatively affect sample analysis. The Thermo Scientific™ Dionex™ AutoTrace™ 280 Solid-Phase Extraction PFAS instrument provides lower background, better recoveries, reproducibility and productivity—helping your lab surmount the challenges of PFAS analysis.

Be more efficient while improving recovery and reproducibility

- Saves time and labor by automating the SPE process
- Automation eliminates errors which occur in manual preparation
- Greatly reduces background contamination using non-fluoropolymer materials
- Accomplish SPE without the need to learn new software

Sample evaporation and reconstitution

Dionex AutoTrace 280 PFAS SPE instrument

Sample evaporation and reconstitution

Unknown screening and discovery

Thermo Scientific™ Q Exactive™ Hybrid Quadrupole-Orbitrap mass spectrometer and Thermo Scientific Vanquish UHPLC system

Targeted analysis EPA 537.1 and EPA 533

Thermo Scientific™ Vanquish™ UHPLC System and Thermo Scientific™ TSQ Fortis™ Triple Quadrupole mass spectrometer

Time and freedom to tackle other challenges

Dionex AutoTrace 280 PFAS instrument

Become a master multitasker.

Automation | Time savings | Easy to Use | Increased efficiency | Reduction of errors
