Thermo Scientific Chromeleon 7 Chromatography Data System

Thermo Scientific™ Chromeleon™ 7 Chromatography Data System (CDS) software provides the reporting options necessary to meet the requirements of your organization. Create reports using the templates provided, or customize according to your needs within a powerful spreadsheet environment.

Get the most out of your data quickly and easily

All Chromeleon CDS installations are supplied with default report templates that meet many of the needs of the modern laboratory. The spreadsheet format for report design affords a comfortable, familiar interface for users. All reports can be customized with company logo, additional run, sample, and instrument variables, or text and pictures to fulfill organization requirements, and the resulting custom report elements, such as tables, plots or sheets can be stored as templates to streamline future report creation. Built-in user management tools enable administrators to decide who can customize reports.
View available report templates with live preview of the sheets, tables, plots and charts for your actual data. Report template thumbnails aid in choosing the proper template from an extensive library. A live preview shows how the current data would appear in the selected template.

Adding tables, chromatograms, plots and charts is simple with the ribbon controls and a live preview of everything available to help you select the correct element.

Quickly include chromatograms, peak analyses, calibration curves, validation results, sequence summaries, audit trails, method information and much more. Ribbon controls enable easy addition of all report elements—just select an area on the spreadsheet and choose the object to insert.
Predefine settings for tables, plots, charts, or page layouts to meet your company requirements and ensure consistency with all operators using the same elements in their reports.

The advanced spreadsheet reporting capability of Chromeleon 7 CDS gives report designers full flexibility in producing comprehensive customized reports. Designers can insert specialty chart objects and use formulas and functions including user-defined formulas.

Utilize the full spreadsheet capability of Chromeleon CDS to perform your post-run calculations in a controlled, compliant environment and eliminate external spreadsheets.
