D-GLUCOSE

REF 984304 (for Gallery and Arena analyzers)
1. 3 x 16 ml Reagent 1
2. 3 x 4.5 ml Reagent 2

REF 984764 (for Arena analyzers only)
1. 3 x 45 ml Reagent 1
2. 3 x 13 ml Reagent 2

INTENDED USE
Reagent for photometric determination of D-Glucose in homogenous liquid samples using automated Thermo Scientific™ Arena™ or Gallery™ analyzer.

METHOD
Enzymatic test with hexokinase (HK) and glucose-6-phosphate dehydrogenase (G6P-DH). Method is performed at 37 °C, using 340 nm filter and 600 nm as a side wavelength.

PRINCIPLE OF THE PROCEDURE
D-Glucose + ATP → HK → Glucose-6-phosphate + ADP
Glucose-6-phosphate + NAD → G6P-DH → Gluconate-6-P + NADH + H⁺

REAGENT INFORMATION

Barcode ID
Reagent 1 (R1) 3 x 16 ml or 3 x 45 ml 707
Reagent 2 (R2) 3 x 4.5 ml or 3 x 13 ml 708

Note: Labels of reagents vials have two barcodes. For Arena analyzers, turn the short barcode on the left side to the barcode reader. For Gallery analyzers, turn the long barcode on the right side to the reading position of the reagent rack.

Precautions
The reagents contain sodium azide (< 0.1 %) as preservative. Do not swallow. Avoid contact with skin and mucous membranes. Take the necessary precautions for the use of laboratory reagents.

Preparation
The reagents R1 and R2 are ready-to-use.

Storage and Stability
Reagents in unopened vials are stable at 2...8 °C until the expiry date printed on the label. Do not freeze the reagents. Reagents are stable 30 days on board.

SAMPLES

Sample Type
Food and other sample material.

Sample concentration and Arena/Gallery application
All method related details are in the separate application notes.

For the high application, the Primary dilution and the Dilution limits Low and High can be changed according to the example table below if needed.

<table>

</table>

Sample preparation
If the sample has substances interfering the measurement, please handle it according to the following suitable preparation procedure:

- Use clear, colorless and practically neutral liquid samples directly.
- Filter or centrifuge turbid solutions.
- Degas samples containing carbon dioxide.
- Crush or homogenize solid or semi-solid samples.
- Weigh sufficient quantity of sample in a volumetric flask (take care of the measuring range), extract with water and filtrate, centrifuge or use Carrez clarification if necessary.
- Weigh sufficient quantity of fat containing samples into a volumetric flask (take care of the measuring range), extract with hot water. Cool to allow the fat to separate, make up the mark, place the volumetric flask in an ice bath for 15 min. and filter. Alternatively use Carrez clarification after extraction.
- Adjust acid samples to pH 8 by adding sodium or potassium hydroxide solution and incubate for approx. 15 min.
- Treat strongly colored samples with polyvinylpolypyrrolidone (PVPP e.g. 1 g/100 ml Sample).

- Carrez clarification:
  Weigh sufficient quantity of the sample into a 100 ml volumetric flask which contains approx. 80 ml dist. water. Subsequently carefully add 5 ml Carrez-I-solution (potassium ferrocyanide, 85 mmol = 3.60 g K₄[Fe(CN)₆] x 3 H₂O/100 ml), 5 ml Carrez-II-solution (zinc sulphate, 250 mmol = 7.20 g ZnSO₄ x 7 H₂O/100 ml) and 10 ml 0.1 M NaOH. Mix after each addition. Fill the volumetric flask with water to the mark, mix and filter.

TEST PROCEDURE
See a separate application for the Arena or Gallery analyzer.

Materials required but not provided
Distilled water (aseptic and free of heavy metals) and general laboratory equipment.

Sugar combination standard Cat no. 984380 (one level, water based) is not included in the kit.

Calibration
Water based Sugar combination standard can be used or other. Ordering code for Sugar combination standard is 984380 (3 x 3 ml). The standard is ready-to-use.

Quality Control
Use quality control samples at least once a day and after each calibration and every time a new bottle of reagent is used. It is recommended to use two level of controls. The control intervals and limits must be adapted to the individual laboratory requirements. The results of the quality control sample(s) should fall within the limits pre-set by the laboratory.

Available controls:
Sugar combination standard can be used. If Sugar combination standard is used also for calibration, an additional internal control is recommended to be used.

CALCULATION OF RESULTS
The results are calculated automatically by the analyzer using a calibration curve.

Conversion factors:
g/l x 5.5506 = mmol/l
mmol/l x 0.18016 = g/l
Note that the calibration curve is lot dependent.

LIMITATIONS OF THE PROCEDURE

Interference
The determination is specific for D-Glucose. No interference was observed.

MEASURING RANGE
The test has been developed to determine D-Glucose concentrations within a measuring range from 0.04 to 160 g/l (high application) and from 5 to 500 mg/l (low application).

PERFORMANCE CHARACTERISTICS
The results obtained in individual laboratories may differ from the performance data given.

Determination limit (=Test limit low)
The determination limit is the lowest concentration that can be measured quantitatively. The determination limit is 0.04 g/l (high application) and 5 mg/l (low application).

Arena shows similar performance.

OTHER REMARKS
Note that the application performance has been verified with pure chemicals dissolved in deionized water and with spiked native samples. The results obtained in individual laboratories may differ from the given performance data due to e.g. sample matrix, concentrations or analysis environment. Each laboratory is responsible to verify the method to prove the analysis performance.

WASTE MANAGEMENT
Please refer to local legal requirements. It is recommended to empty the analyzer cuvette waste bin and waste water daily. Emptying should be done immediately after the analysis when using hazardous reagents/solutions.

Note: If using reagents/solutions that react with each other, cuvette waste bin and waste water should be emptied and washed between use of these reagents.

ADDITIONAL MATERIAL
Certificate of analysis and SDS are available at www.e-labeling.eu/TSF.

Applications for Gallery and Arena automated analyzers are available upon request from the local sales representative. Information in the Application note can change without prior notice.
