

Connect, automate, secure: a symphony of CE efficiency

Sanger sequencing

Upgrade to InnoviGene Suite software—built for today’s security and compliance needs

The Applied Biosystems™ InnoviGene™ Suite software offers enhanced cybersecurity features, allowing users to access their data from any browser securely. This comprehensive software platform provides support for 21 CFR Part 11, catering to biopharma and clinical research applications. Leveraging built-in AI-based base calling, users can improve data analysis accuracy.

The suite also includes automated reporting capabilities, streamlining the generation of comprehensive reports, and facilitates easy data sharing. Experience the convenience and advanced features of the InnoviGene Suite, revolutionizing genetic research and data analysis processes.

When you upgrade to InnoviGene Suite software you'll benefit from additional features not available on other software modules:

Key features	InnoviGene Suite capabilities	Other software
Integrated browser-based platform	✓	–
Windows 11 compatible	✓	✓
SAE* console support	✓	–
AI-predicated basecalling	✓	✓
Automation of processes	✓	–
Variant detection	✓ (Ref <100 kb)	✓
Customized reporting	✓	–

SAE: security, audit, and electronic signature
