

Top six benefits of partnering with HPS

Confidence in your workflow is foundational to finding the truth. Partnering with HPS streamlines workflow design, validation, and implementation, allowing you to focus on finding answers.

1

Understand the performance of YOUR instruments

Performance characteristics and parameters of your methods are the basis used by HPS to create definitions and documentation of your laboratory systems and demonstrate laboratory procedures for your laboratory team.

3

Comprehensive teach-backs

Receive comprehensive reports and teach-backs from the data and evaluation of your workflow for a thorough knowledge transfer.

5

Comply with forensic standards

Achieve accreditation faster. HPS services meet and often exceed published validation standards and guidelines.

2

Service that meets your needs

HPS Validates reagents, consumables, instrumentation, and software using service packages tailored to meet your specific needs.

4

Standard Operating Procedures (SOP)

Data gathered from your lab is used to create SOPs, set thresholds, and define interpretation guidelines.

6

Save time

Get online without workflow interruption. Implement new technologies without impacting daily operations.

Expert services at your fingertips

Since 2007, the Human Identification Professional Services (HPS) team has supported forensic laboratories by providing comprehensive validations and implementation support, both vital for bringing new technologies into operation. Our consultative validation, training and implementation services build the necessary data-driven foundation to help forensic DNA labs integrate, validate, and implement new methodologies and technologies.

The right solutions to meet your needs

Whether you need a complete turnkey solution or to validate a single component, you can trust that the experience of the HPS team will help you achieve your goals. The proven HPS project framework is based on years of experience and provides a standard framework. It also allows the flexibility to design a validation project specific to your organization, providing you with valuable deliverables, hands-on experience, and dedicated training.
