# Introducing new CO2 Sensors 新CO2探头

Traditional IR sensor contains an incandescent bulb that puts out less light as it ages, resulting in sensor drift. 传统的红外传感器包含一个白炽灯泡，因为长时间使用会逐渐变暗，导致传感器漂移。

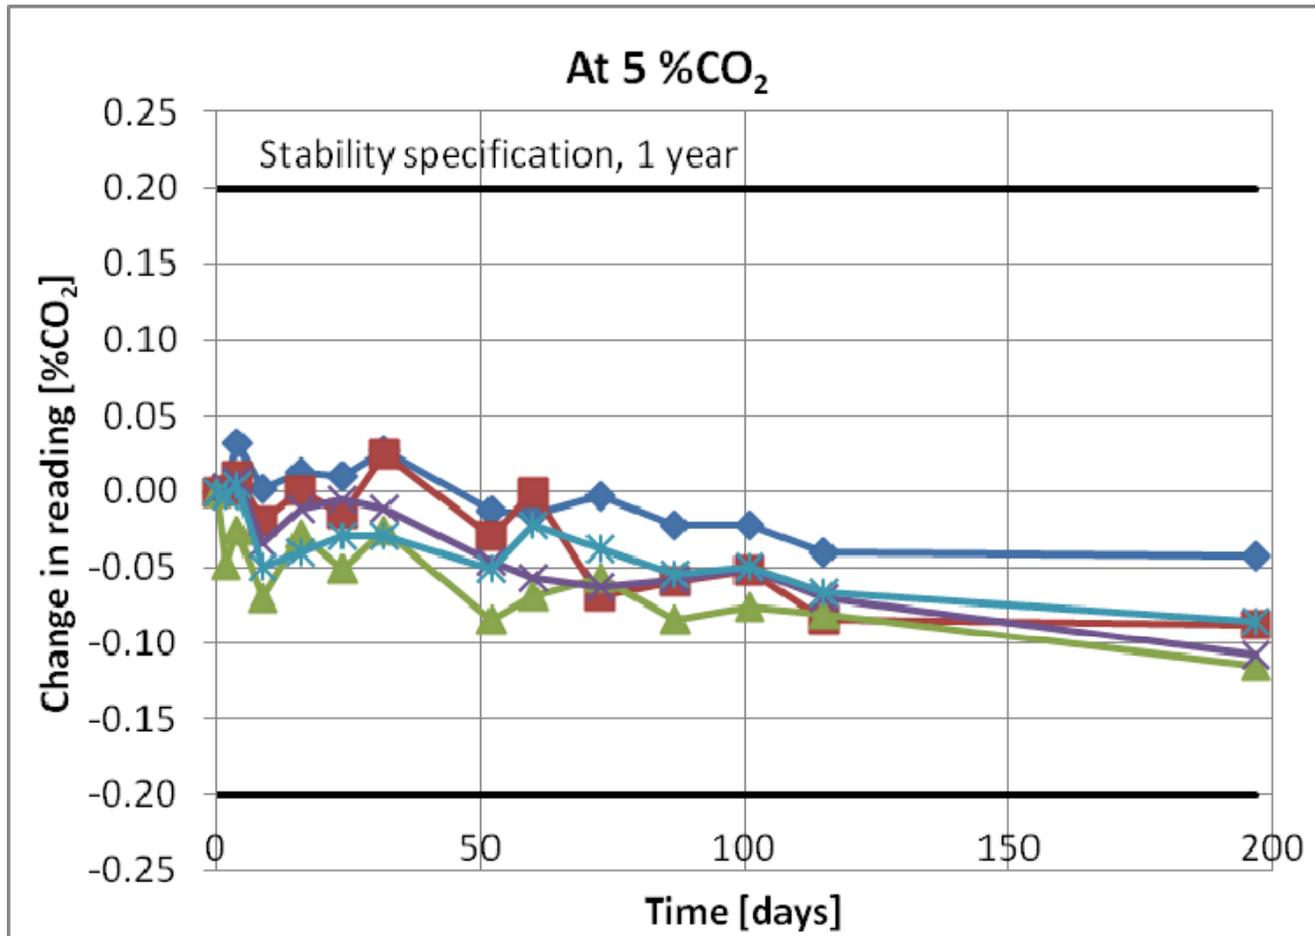

Our silicon MEMS emitter is designed to not lose intensity over time, lasting up to 50% longer than ordinary IR sensors. 我们的硅MEMS发射器因为设计原因不会随着时间的推移而失去强度，所以比传统红外探头使用寿命延长50%以上。

## Mycoplasma Survival Results

MYCOPLASMA STRAIN	POSITIVE CONTROL	CONVENTIONAL TYPE 304 STAINLESS STEEL	PANASONIC InCu-SaFe®	CONVENTIONAL COPPER C1100
MYCOPLASMA FERMENTANS PG18	✓	✓	✗	✗
MYCOPLASMA ORALE CH19299	✓	✓	✗	✗
MYCOPLASMA ARGININI G230	✓	✓	✗	✗
MYCOPLASMA HOMINIS PG21	✓	✓	✗	✗

Chart summarizes test results with four strains of mycoplasma. Results demonstrate how Panasonic inCu-saFe® copper enriched stainless steel alloy offers germicidal properties of conventional C1100 copper while maintaining both corrosion-proof and discoloration-resistant properties of conventional Type 304 stainless steel. Detailed test results are available from Panasonic.

Mycoplasma were chosen for this study because they are the smallest organisms that are most responsible for contamination in a laboratory. Traditional methods of contamination control, such as heat or HEPA filters, do not prevent mycoplasma growth.
