Control the elements

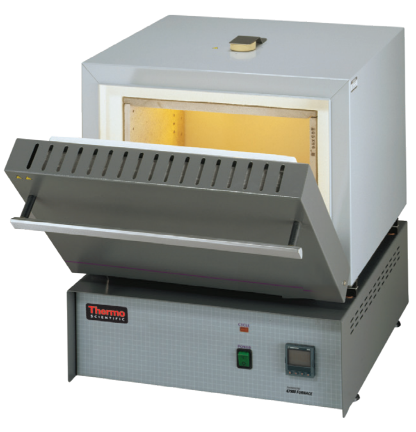
Thermo Scientific heating equipment

Applications in every industry

Thermo Scientific™ products deliver reliable temperature, humidity, and light conditions to meet the needs of your application.

- Automotive
- Biotechnology, pharmaceutical, and clinical
- Academia and research
- Agriculture, environmental, and wastewater
- Food production
- Electronics
- Chemicals and paint
- Optical

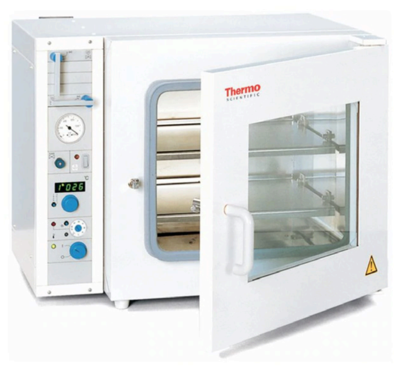
Treatment • Testing • Drying • Incubation • Storage



Lab furnaces
+100° to ~1,200°C

Industries

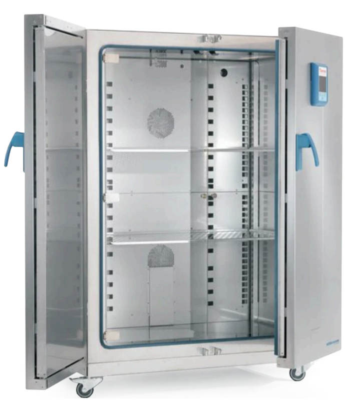
Applications
- Ashing of samples
- Metal treatment
- Material testing



Vacuum ovens
+50° to ~400°C

Industries

Applications
- Drying of samples, boards, and solvents
- Heat treatments



Lab ovens
Ambient
+10/15° to ~330°C

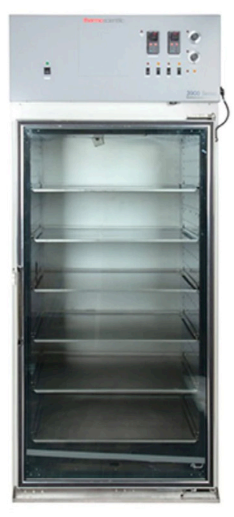
Industries

Applications
- Drying of samples, boards, and glassware
- Material testing

Microbiological incubators
Ambient
+5° to ~70/105°C

Industries

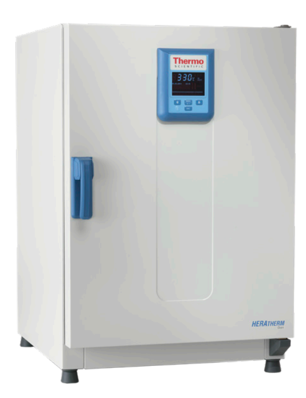
Applications
- Microbiological testing and research



Environmental chambers
0° to ~60°C

Industries

Applications
- Stability testing
- Plant growth and animal hatching
- Storage and environmental testing



Refrigerated incubators
-10/+5° to ~70°C

Industries

Applications
- Microbiological testing and research
- Biochemical oxygen demand testing

Did you know?

A record of reliability
Thermo Scientific controlled heating products have a long legacy of delivering superb temperature uniformity and quality designs.

Trusted temperatures
Thermo Scientific furnaces feature temperature programming for ease of use and consistent sequencing.

Reproducible results
Thermo Scientific environmental chambers and refrigerated incubators are known for reliability that translates to reproducible test results.

Emphasizing safety
Thermo Scientific microbiological incubators can test for food-borne microbes that cause illnesses like *Salmonella* and *E. coli*.
