

Designed to help you maintain your focus and peace of mind

DeviceLink system connectivity and the InstrumentConnect platform

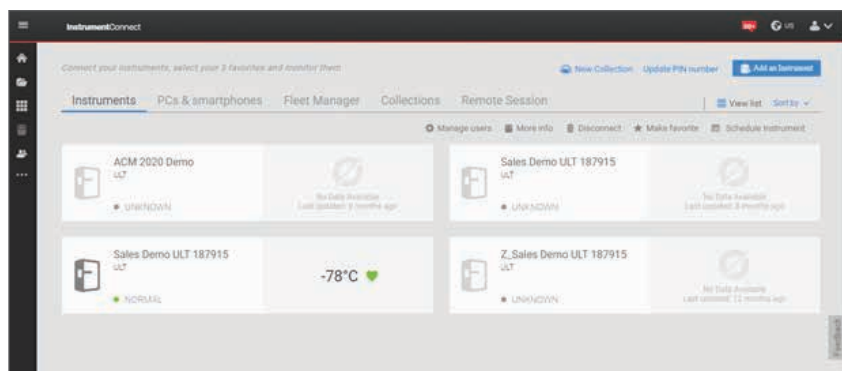

- The Thermo Scientific™ DeviceLink™ system is a built-in capability of your laboratory equipment that enables a Wi-Fi-based connection to transmit equipment data*
- The InstrumentConnect app is the cloud-based platform enabling real-time monitoring of the data transmitted by the DeviceLink system

InstrumentConnect

Instrument health and historical system data are available to users when the equipment is connected. The InstrumentConnect app enables users to monitor their equipment from anywhere in the world from the convenience of your mobile device or computer. InstrumentConnect supports **in-application alerts, email, and push notifications** for the following types of information:

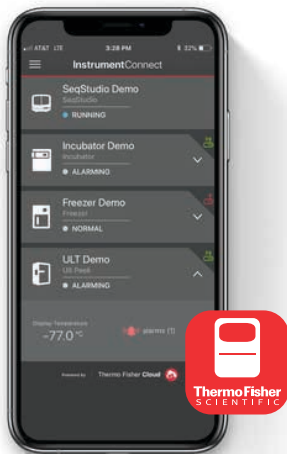

- **Measurement data**—temperatures, run protocols, and settings
- **Alarms**—system, environmental, and connectivity
- **Event notifications**—warnings and user-based events

* DeviceLink Wi-Fi technology not available in all countries/regions.

 Create your InstrumentConnect account today.

Features:

- Instrument dashboards for at-a-glance monitoring
- Fleet Manager to group and monitor equipment by type/sites/status
- Connect an unlimited number of devices to a single account
- Instrument and profile-level settings
- Graphical data for historical views over time
- Notification logs
- Customizable alarm and notification settings
- Downloadable reports for continuous documentation
