We make ammonia measurements easy by offering a complete line of ammonia standards, reagents, storage solution and fill solutions for your ion selective electrode. Combined with an Orion ammonia electrode, our solutions provide highly accurate measurements, low limits of detection and easy maintenance.

**Thermo Scientific Orion Ammonia Solutions**

**Electrode Storage Solution and Low Level Ammonia ISA**

**Benefits**
- Low level ISA contains dye that changes blue when sample pH is in the correct range for ammonia measurements
- Storage solution is pre-mixed, so it can be used right out of the bottle
- Use the new solutions with both the high performance ammonia electrode (9512HPBNWP) and standard ammonia electrode (9512BNWP)
- Solutions are available in 475 mL (1 pint) bottles

**Markets**
- Drinking Water
- Wastewater
- Soils and Agriculture
- Metal Plating Baths
- Seawater

**New Orion Ammonia Solutions**

The ammonia electrode storage solution (951213) is recommended for storing the assembled ammonia electrode between sample measurements, overnight and up to one week. Ensure that your ammonia electrode will work properly and be ready to take accurate, stable readings by using the optimum solution for its storage.

The low level ammonia ISA (951210) adjusts the pH and ionic strength of ammonia standards and samples for the most accurate low level ammonia measurements. The solution contains a pH-indicating blue dye and is specially formulated for measurements of ammonia samples with a concentration of 10 ppm or less that do not contain metal interferences.
# Specifications and Ordering Information

## Thermo Scientific Orion Ammonia Solutions

For more information or to contact your local water quality specialists, call 1-800-225-1480 or visit our website at [www.thermo.com/water](http://www.thermo.com/water).
