

#### CytoScan<sup>®</sup> Cytogenetics Suite CytoScan 750K

Educational Examples of Different Aberration Types

eBioscience GeneChip Panomics USB

- A set of different samples analyzed with CytoScan 750K is provided for educational propose
- A set of samples analyzed with CytoScan HD is provided for additional information.

 Sample display color might be different in this presentation when compared to your software.

- This sample represents a mosaic loss in the same region as the previous sample
- 20% mosaic is visible on the smooth signal and allele peaks tracks.
- Confirmed by interphase FISH

aff

- A mosaic segment/flag was drawn with the "Edit" mode for simplified identification
  - 24

# A CLL sample with many mosaic aberrations

• This CLL sample has many educational aberration types.

25

#### Mosaic Gain

- Chromosome 5 illustrates a mosaic gain. The mosaic can be identified with smooth signal and/or the mosaic segment/flag. Mosaic level is estimated at 60%
- The split in the allelic peaks track can confirm the finding

affymetrix Biology for a better world

### Mosaic loss and mosaic gain

Biology for a better work

#### • Chromosome 8 illustrates a mosaic loss and a mosaic gain.

27

# Mosaic loss and mosaic copy neutral LOH

• Mosaic Loss is highlighted by the light red segment/flag. Mosaic LOH/AOH can be identified by the absence of change in the smooth signal and the change in the inner bands of the allelic peaks track

#### Mosaic Gain

- This sample illustrates a mosaic gain on chromosome 12.
- Mosaic has been estimated at 85-90% using smooth signal and mosaic segment/flag.

# **ROH/AOH/LOH Examples**

# Regions identical by descent Genomic profile of consanguinity

#### 09-420\_B2\_Phase4CustomerPanel\_CytoScan\_PS\_20110228

#### This example illustrates blocks of LOH >10 Mb across a majority of the Chromosomes.

# Regions identical by descent Detailed view of chromosome 2

- This is an example of two blocks of LOH >10 Mb on chromosome 2.
- There is also a hemizygous loss on this chromosome illustrated by the red segment

# Copy neutral LOH on chromosome 11 Karyoview illustrating LOH >10 Mb

- Only one autosomal chromosome (Chr 11) has a block of LOH greater than 10 Mb.
- The chromosome has blocks because is a male sample.

# Copy neutral AOH/LOH on chromosome 11. Closer detail illustrating LOH >10 Mb

• This set of samples represents a trio. The Mendelian Error Check Function was used to check for relatedness.

• The trio is consistent, but there is an increased rate of errors on Chr15, compatible with a maternal het-UPD
