Product Specific Information

MN1020 targets PHF-tau (Ser202/Thr205)a in ELISA, IF, IHC(P), and WB applications and shows reactivity with Human samples.

The MN1020 immunogen is partially purified human PHF-Tau.

MN1020 detects PHF-tau (Ser202/Thr205)a which has a predicted molecular weight of approximately 79 kDa.

This product is a Low Endotoxin formulation.

Background/Target Information

Paired helical filament (PHF) is a major component of the neurofibrillary tangles involved in the pathology of Alzheimer's disease. PHFs are composed of the microtubule-associated protein tau in a hyper-phosphorylated state (ref1). Tau protein is produced by a single gene expressed predominantly in neurons. The Tau gene undergoes complex alternative splicing, yielding six different isoforms of tau in the adult brain. Following translation, the tau protein can be further modified by phosphorylation at several different sites
