SiteClick™ Antibody Azido Modification Kit

For detailed protocol, visit the product page at thermofisher.com.

Storage
Store at 2–8°C. Do not freeze. When stored as directed, the product is stable for at least 6 months.

Overview
The SiteClick™ Antibody Azido Modification Kit allows you to attach an azide moiety to an unlabeled antibody. The azide-modified antibody can then be conjugated to Click-iT™ sDIBO Alkyne labels.

Materials needed, but not provided
- 100 µg–5 mg of antibody, ideally at a concentration of 2–20 mg/mL in a Tris-based buffer, free of carrier proteins and/or azide
- PBS or TBS
- Distilled water
- Click-iT™ sDIBO Alkyne for SiteClick™ Antibody Labeling
Workflow

For detailed protocol, visit the product page at thermofisher.com.

Day 1 (Hands-on time: ~1.5 hours)

1. *Optional:* Concentrate the antibody and exchange buffer.
   (Time required: 1 hour)

2. Modify the carbohydrate domain of the antibody.
   (Time required: 4 hours, hands-off)

3. Attach azide moiety to the carbohydrate-modified antibody.
   (Time required: 5 minutes hands-on, then overnight incubation)

Day 2 (Hands-on time: ~1 hour)

4. Purify and concentrate azide-modified antibody.
   (Time required: 1 hour)
