USER INFORMATION

Product Description: Ambion® Formamide is deionized, has a conductivity of less than 100 μohm, and may be used straight from the bottle, after warming to room temperature, for most applications when stored at 4°C and used within three months of purchase. Decomposition products of formamide can degrade nucleic acids. Ambion formamide is packed under argon in amber bottles to reduce the rate of decomposition. Formamide can be deionized by treatment with ion exchange resin. For critical applications we recommend redionization of frequently opened bottles.
