

Start working while you wait

Get your instrument before your funding with the Bridge to Grant Program

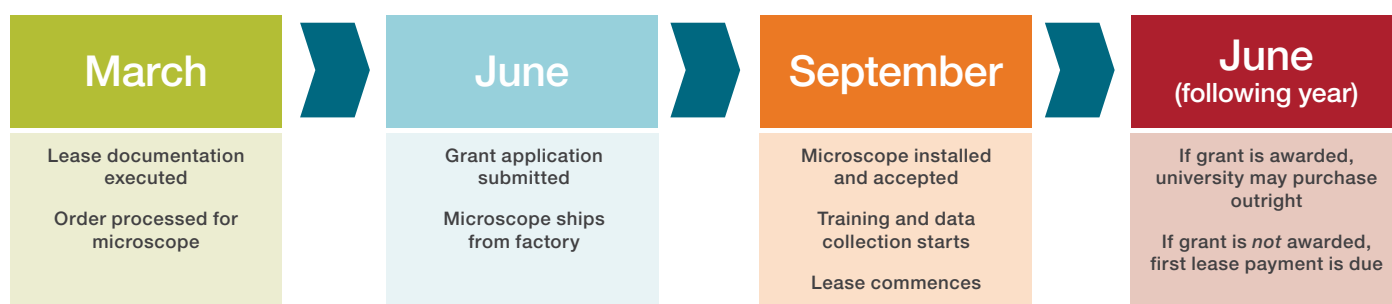

While government funding agencies provide funding that advances scientific research, they typically award grants only once per year. But with our Bridge to Grant Program, you can have your instrument installed on your timeline, up to a year before receiving your grant funding.

Challenge

Many academic customers rely on grant awards to fund their instrumentation and the grant review process can take up to 20 months.

Solution

Deferred payment solution that allows universities to take delivery while they await decision of their grant application (3–12 months from installation). Timeline example below.
