

Polymer Additives and Plasticizers

Library Listing – 1,799 spectra

This library is a valuable addition to any polymer chemist's toolbox. It includes spectra of plastics and additives for polymers, rubbers, cosmetics, adhesives, sealants, and plasticizers.

The Polymers, Polymer Additives and Plasticizers Library features 1,799 spectra collected by Chemir/Polytech Laboratories and Dr. John Kokosa. Samples were run by transmission using one of the following techniques: molded film, capillary film or KBr disk. Each spectrum in the library includes information on manufacturer, chemical name, product name, chemical abstract number, and category name, where available.

Chemically, the classes of polymer compounds represented in the library include: thermoplastics, thermoset resins, engineering polymers, monomers, and catalysts. Additives represented include: plasticizers, mold release agents, inorganic fillers, antistatic agents, surfactants, and colorants.
